

General Inspections

Simplify your
Inspection Processes

Inspection plays a vital role in the upkeep of facilities and asset maintenance, especially across asset-intensive industries like education, healthcare, manufacturing, and the public sector. Conducting regular inspections is an important component of a preventive maintenance approach for mission-critical equipment and assets.

A comprehensive inspection process requires access to a vast and wide-ranging pool of asset data and the analytical capability to drive actionable insights. However, the prevalence of paper-based inspection methods and legacy, siloed data platforms often slow down the process, especially when viewed in the context of rapid digital transformation in other aspects of operations and business.

Regulatory authorities (like OSHA) require enterprises to perform regular machinery checks and retain inspection records as proof of commitment to safety at the site.

TMA Systems' General Inspections module simplifies and streamlines the enterprise-wide inspection process by leveraging a combination of technology and best practices perfected using field data from over three decades of experience. The module provides a global checklist for assigned assets and areas, runs a sequential review of each check, and documents the results. It allows technicians to perform and track a series of tasks for all maintenance-worthy items within the organization.

In the field, technicians can utilize WebTMA GO* or mobileTMA GO** to complete inspections, create a digital record of the findings and upload inspection results for analysis. This eliminates the need to carry paper inspection forms – saving time and eliminating the risk of lost paperwork.

The Features

Pre-configured reportable fields
on corrective work orders resulting
from failures

Support for complex multi-asset
inspections

**Creation of multiple corrective
work orders** for multiple failures on
the same inspection

Complex inspection checklists that allow for readings, pass-fail, and/or comments.

Offline mobile functionality for complex inspections to be performed without an active internet connection.

The Benefits

Streamline creation of corrective work orders during inspection failures

Eliminate paper inspection forms utilizing WebTMA GO or the General Inspections Add-on for mobileTMA GO.

Leverage PM Scheduling functionality for auto-generation
