

How to Talk About AI

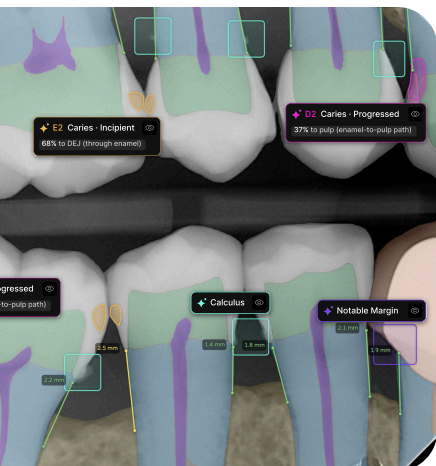

What is Pearl?

Pearl equips dental practices at every stage of the patient journey, from diagnosis through reimbursement. Combining trusted radiologic AI with practice-wide operational intelligence, Pearl's connected suite of tools helps clinicians detect more disease, communicate findings with greater clarity, streamline daily operations, and increase revenue performance.

Powered by Pearl, practices run more efficiently, build stronger patient trust, and capture every opportunity for growth.

Questions to ask when introducing Pearl to your customers.

- + Confirm which Practice Management system and Imaging Systems they use.
- + If you had the ability to quickly and accurately look back at the previous 18 months of charts to verify every diagnosis, what kind of pathology do you think you might find?
- + Are you currently leveraging the mountains of data sitting in your practice management and imaging systems to identify potential undiagnosed pathology in your existing patient base?
- + You mentioned wanting to improve your case acceptance rate next year what tools or strategies have you been looking at so far to achieve that?

Pearl helps you catch what you might otherwise miss — and helps patients say yes to the care they need.
