Medicines & Healthcare products  
Regulatory Agency

# Embedding Sustainability in Everyday Care

At NHM, we operate at the heart of healthcare environments where reliability, safety, and responsibility are critical. We believe Environmental, Social, and Governance (ESG) is not a standalone initiative it is embedded in how we deliver services every day.

Our role is simple but essential: to ensure medical equipment is safe, compliant, and sustainable, supporting continuous care. By extending the life of equipment, reducing unnecessary waste, and supporting communities, we contribute to a more sustainable healthcare system.

## Approach: Practical and measurable impact

Our ESG approach is built around practical, measurable impact. We focus on:

- Reducing environmental impact through smarter servicing
- Supporting communities through meaningful action
- Delivering transparency, compliance, and accountability

Our sustainability impact comes directly from how we operate – not just policy, but action.

# Vision: A trusted partner in sustainable healthcare

To be a trusted partner in sustainable healthcare by reducing waste, extending asset life, and delivering measurable environmental and social impact across every care environment we support. We believe:

- Sustainability should improve care, not complicate it
- Social responsibility should be consistent, not occasional
- Governance should create clarity and confidence

Our journey so far

**Sustainability and responsibility are already embedded in NH Maintenance.**
