

Fact Sheet

# Technology

Based on more than 25 years of clinical operations expertise, we at SCOPE believe in technological solutions that support the way we and our customers work.

Our goal is to provide flexibility based on our customer's needs, and consequently, we select the best solutions in the market and combine them with our custom developed solutions and integrations.

We achieve compliance with global regulatory standards and use of cutting-edge technology while adhering to budgets.

### CTMS

We offer our **custom full scale CTMS solution, IN-SIGHT**, which is particularly strong in document management. Furthermore, we have a **preferred CTMS vendor, BSI**, who offers an integrated eTMF. If desired, we accommodate your preferred CTMS vendor.

### EDC / ePRO / RTMS

SCOPE partners with vendors like Viedoc, Merative and Oracle allow us to build study-specific data collection solutions that are **fit for purpose** for each individual project.

### eTMF

We are experienced with various eTMF providers including TransPerfect, BSI, Veeva, Medidata and Phlexglobal. Our preferred eTMF solutions are Trial Interactive from TransPerfect and BSI eTMF, as they **meet regulatory requirements at a fair market value**, however we are flexible to work with other eTMF solutions as well.

### Customised Solutions

We provide **the technical solution that works for you**. In the last years, we have successfully set up and used study specific solutions like a subject randomization system, an IP allocation system and a mobile app.

# Your CRO of Choice with great **Technology**

### Artificial Intelligence

Our AI initiatives are purposefully designed to support, not replace, scientific and regulatory rigor. We are steadfast in our commitment to subject safety, data integrity, and compliance across every function we touch. We carefully select each AI tool to ensure it is appropriately suited to its intended purpose.

By integrating humans-in-the-loop (HITL) principles, we ensure that artificial intelligence is not just thoughtfully applied but also guided by expert oversight. This collaborative approach combines the strengths of advanced AI technologies with the critical judgment, experience, and ethical standards of our research professionals. As a result, **AI solutions enhance research value** while maintaining scientific integrity, data privacy, and regulatory compliance—**always keeping humans at the center of decision-making**.

### eConsent

Partnering with specialized providers ensures that our clients benefit from **state-of-the-art platforms** while maintaining full compliance with global regulatory standards.

### Safety Database

SCOPE's custom solution for drug safety case management **supports the complete ICSR lifecycle** from initial case intake and triage through medical assessment, quality control and controlled finalization. The system is designed to ensure data integrity, operational efficiency, transparency, and inspection readiness.

### Medical Coding

In SCOPE's custom medical coding system, data managers and medical monitors can **efficiently code and review medical events** and medications while maintaining full transparency, quality control, and regulatory alignment.

### Safety Reporting

SCORIS is our custom module for regulatory safety reporting, **designed to manage expedited and periodic reporting obligations** and to provide oversight of reporting compliance to institutions and investigators within clinical studies.
