

Fact Sheet

Pain

At **SCOPE**, we combine **long-standing expertise** in pain management trials with a **full-service approach** – guiding your study from concept to delivery. Whether drug, device, or combination product, we design robust development plans and ensure smooth execution for **adult** and **paediatric populations**.

Proven Experience that Delivers

Our expertise ensures reliable study planning, engaged sites, effective recruitment, and minimised trial risks – saving time and protecting your investment.

55 / Completed Pain Studies

1,700 / Qualified Sites

12,000 / Subjects

Strong Networks – Faster Feasibility

Through close partnerships with neurologists, pain clinics, palliative specialists, surgeons, anaesthetists, general practitioners, and KOLs, we provide rapid, accurate feasibility estimates. Established relationships accelerate start-up, strengthen site performance, and support compliance with local regulations, including controlled substance handling via our 11 local offices.

Your CRO of Choice for _____ Pain

Expert Teams – Quality That Lasts from Start to Finish

Experienced CRAs, project managers, data managers and medical monitors oversee your trial. Project managers identify and **mitigate risks from the outset**. Selecting the **right endpoint instrument** is critical for regulatory acceptance. We advise on **validated, guideline-compliant tools**, including:

Brief Pain Inventory

Numeric Rating Scales

Visual Analog Scales

Mood & Symptom Questionnaires

West Haven Yale Multidimensional Pain Inventory

more ...

Primary Pain Endpoints & Patient Centricity

Patient compliance is key to ensuring high-quality data. To minimise burden, we implement **electronic Clinical Outcome Assessments (eCOA)** – including ePROs and eDiaries – accessible via apps, tablets, smartphones, or PCs. This approach enhances patient experience, boosts compliance, and strengthens data integrity.

For trial participants unable to self-report – such as young children – observers (e.g., parents, caregivers) provide **Observer-Reported Outcomes (ObsRO)** based on observable signs like wincing, crying, or squirming. **Clinician-Reported Outcomes (ClinRO)** are similarly limited to observable data.

Pain Intensity

Function

Opioid Sparing

Health-Related Quality of Life

Rescue Medication Use

Experience in Pain Indications

Acute Postoperative/Procedural Pain

Arthritis-Related Pain

Rheumatic Pain

Bladder Pain Syndrome

Cancer Pain

Chronic Pain

Headache/Migraine

Lower Back Pain

Neuropathic Pain

Post-Surgical Pain Management

“Deep therapeutic understanding”

Managing pain studies is complex. SCOPE demonstrated deep therapeutic understanding, excellent site coordination and strong operational control throughout the study.
