Evaluations of Animals less than 12 months of age can be performed for private use of the owner.
However, certification will not be possible at this age.

OFA recommends that the test be repeated when the animal reaches 12 months of age.

TEST: BASIC CARDIAC

RESULTS: Normal cardiovascular examination via auscultation - No evidence of congenital or acquired heart disease was noted. Since acquired heart disease may develop later, these evaluation results remain valid for one year, and annual examinations are recommended to continue to monitor cardiac health.

OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.
Distraction Index Chart:

GREAT DANE

BREED STATISTICS: This interpretation is based on a cross-section of 2490 canine patients of the GREAT DANE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.20 - 0.59) for the breed. The breed average DI is 0.37 (solid square). The patient DI is the solid circle (0.33).

SUMMARY: The degree of laxity (DI = 0.33) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. No radiographic evidence of OA for either hip.
