Climate

Climate sensors to ensure comfort and productivity

Accurate Climate Sensors

Sensors for automatic climate regulation in livestock houses

Climate sensors are used in livestock houses to ensure proper animal welfare and to achieve high productivity by providing data for automatic climate regulation.

dol-sensors manufactures both single-function and multifunction climate sensors for monitoring:

- Temperature
- Humidity
- CO2
- Ammonia
- Light
- Wind speed and wind direction

DOL 114 Humidity and Temperature Sensor

Humidity / Temperature

DOL 104 Humidity Sensor

The DOL 104 is a high-precision sensor for measuring relative humidity designed for use in livestock houses but is also well suited for a number of industrial applications. The sensor has an analogue output with a very low output resistance and full protection against short circuits and wiring failures. The special sensor element and the built-in filter enable application in livestock houses with constantly high humidity. A microprocessor controls the sensor and has a two-colour light emitting diode (LED) for communication of operation status and error diagnostics. A protective cap is available, eliminating the need to remove the sensor when cleaning the livestock house.

[Read more about DOL 104 Humidity Sensor here.](#)

DOL 114 Humidity and Temperature Sensor

The DOL 114 is a high-precision sensor for measuring both relative humidity and temperature simultaneously. It is used in livestock houses but is also well suited for a number of industrial applications.

The sensor has the same excellent properties as the DOL 104 digital humidity sensor. Like DOL 104, the DOL 114 is available in various output versions, such as 0-5V, 0-10V, and 4-20mA.

[Read more about DOL 114 Humidity and Temperature Sensor here.](#)

DOL Wireless Grain Sensor CSS-TM

DOL Wireless Grain Sensor CSS-TM is a wireless sensor spear designed for grain monitoring to prevent damage of crops. The grain sensor accurately monitors the temperature and moisture of plan stored crops. It is portable and therefor easily moved to where it is needed.

The data from the sensor is displayed in the AgroLog App on your smartphone. The app sends notifications when critical thresholds are reached.

Humidity / Temperature

DOL 139 Humidity, Temperature, and CO₂ Sensor

DOL 139 is a smart 3-in-1 sensor combining measurement of both relative humidity, temperature, and carbon dioxide (CO₂). Since DOL 139 measures 3 important elements of the environment; humidity, temperature, and CO₂, it makes for an easier installation, less maintenance and a more cost-effective solution. No need for multiple sensors when you can use a single sensor to measure 3 elements.

DOL 139 is protected by a sturdy casing and behind a carefully selected filter. It is supplied with a protection cap for protection of the sensor during washing and disinfection, even during high-pressure cleaning.

[Read more about DOL 139 Humidity, Temperature, and CO₂ Sensor here.](#)

Temperature

DOL 112 Temperature Sensor

DOL 112 is a simple cost-effective temperature sensor that comes in three different versions; PT100, PT1000 and NTC.

The sensor is robust standard temperature sensor with the high quality known from other dol-sensors' sensor solutions. Thus, DOL 112 is well suited for use in environments where a sturdy design is required.

The temperature sensor can operate in temperatures between -40 and +100 °C and can be used for measuring both inside and outside temperatures.

DOL 112 is IP 68 protected, which means that it is dust tight and has total protection against water ingress, up to and including complete submersion below one meter and for more than 30 minutes.

In accuracy, the DOL 112 PT100 and PT1000 stands out with a precision of ± 0.5 °C. The NTC comes in a 1K version with an accuracy of 3% at 25°C and a 10K version with an accuracy of 1% at 25°C.

DOL 115 Temperature Sensor

DOL 115 is a precision sensor for temperature measurement which comes with a 2-meter cable. It is intended for use in livestock houses but is also well suited for a number of industrial applications.

The sensor features two analogue outputs with very low output resistances and full protection against short-circuits and wiring failures.

DOL 115 temperature sensor is microprocessor-controlled and has a two-color light emitting diode (LED) to communicate the operation status and the error diagnostic.

Gas

DOL 53 Ammonia Sensor

The award winning DOL 53 is a sensor designed to continuous measurement of ammonia (NH₃) concentration in livestock houses. The negative effects of high ammonia concentration in livestock production is well known, and with the introduction of the DOL 53 the farmer is now finally able to monitor the ammonia concentration continuously and take corrective actions if ammonia levels are increasing.

The DOL 53 features accurate ammonia measurements in both low and high concentrations, negligible cross sensitivity to other gasses and a long lifetime, without the need for calibration. The DOL 53 can be mounted directly in the livestock house, without any need for tubes or pumps. The DOL 53 measures ammonia concentrations from 1.5 to 100 ppm, with an output range of 0 to 10V.

[Read more about DOL 53 Ammonia Sensor here.](#)

Gas

DOL 119 CO₂ Sensor

DOL 119 is a new generation innovative CO₂ sensor with an IP67 protection rating. It withstands a harsh environment and doesn't have to be taken down during high pressure cleaning in animal houses if protection cap is applied. The sensor's measuring range is based on monitoring the comfort area of the animals and partly supervising fault conditions in livestock houses integrating direct combustion.

[Read more about DOL 119 CO₂ Sensor here.](#)

DOL 51 Ammonia Sensor for Air Cleaning

The DOL 51 ammonia sensor is specifically designed for continuous measurement of ammonia (NH₃). DOL 51's innovative design, where air is funnelled to the measuring inlet through a heated duct that prevents condensation, allows DOL 51 to operate under these conditions. The clean gas side of air cleaners is one such application where DOL 51 makes it possible to measure the remaining ammonia concentration after a passage of the filters. Data that is vital to documenting the cleanness of the exhaust air. Combined with data from DOL 53 on the inlet side of the air cleaner, data from DOL 51 can be used to ensure that air cleaners run as efficiently as possible at the lowest possible cost of additives.

[Read more about DOL 51 Ammonia Sensor for Air Cleaning here.](#)

Light

DOL 16 Light Sensor

The DOL 16 is a sensor designed to measure light intensity in terms of lux. It has been developed to handle the harsh livestock environment, but is also well suited to a number of industrial applications. The light intensity or illuminance is an important factor in optimizing the growth of broilers and optimizing egg production by layers. An active control of light intensity by use of DOL 16 will help achieving high productivity while also saving energy. The DOL 16 sensor is available with various output ranges, ranging from 0-50 lux all the way up to 0-1000 lux.

[Read more about DOL 16 Light Sensor here.](#)

Weather

DOL 58 Weather Sensor

The DOL 58 measures wind direction, wind speed, and air pressure. Wind speed and direction are measured using ultrasound, which means the weather sensor has no moving parts. Eliminating the impeller and wind vane of typical weather sensor, allows the unique DOL 58 to be extremely robust, reliable and service-friendly. DOL 58 is available with 0-10V or 4-20mA outputs. A version with temperature output instead of air pressure is also available.

[Read more about DOL 58 Weather Sensor here.](#)

DOL 111 Rain Detector

The DOL 111 is an optical rain detector. It has built-in optical probes for rain detection and comes with a 30-meter cable for easy installation. To ensure automatic closing of inlets in case of rain for example in cattle stables, DOL 111 rain sensor can be connected to a climate computer.

DOL 111 is designed to override cycle programs, stopping the system during rainfall, and keeping it off for a while after rain has fallen. Thus, it can be used with irrigation controllers for stopping sprinklers at the field e.g. Irrigation will resume once the sensor dries out or it rains below 6.35 mm/hour.

[Read more about DOL 111 Rain Detector here.](#)

Pressure / Accessories

DOL 18 Sub-Pressure Sensor

The DOL 18 sensor is used for very precise measurement of negative pressure. It is used primarily for measuring negative pressure in livestock houses and to trigger an alarm if the pressure is too low or too high, but it can also be used in other environments where there is a need for measuring negative pressure. DOL 18 is available with a wide selection of measuring ranges from 25Pa to 1250Pa, and with 0-5V, 0-10V, and 4-20mA outputs.

[Read more about DOL 18 Sub-Pressure Sensor here.](#)

Accessories

Climate sensors are often used in livestock houses that are subject to regular cleaning. It is therefore important that the sensors can be easily dismantled and refitted. dol-sensors offers various plug systems to allow for an easy and service friendly installation.
