CORPORATE BROCHURE

...making sense in **YOUR** production

About dol-sensors a/s

A Recognized Global Brand

dol-sensors is a recognized global brand that innovates, designs, and produces high-quality sensors and tailor-made sensor solutions for improving livestock production and animal welfare.

We design, produce, and market intelligent capacitive sensors, climate sensors, and management sensors.

50 Years of Innovation

We have specialized in the agricultural industry for more than 50 years and always contributed to a better production through innovation of outstanding solutions.

Our Mission

Our mission is to provide intelligent sensor solutions to contribute to global efficient and sustainable food production.

Our Vision

Our vision is to be the leading supplier through innovation of climate, capacitive, and management sensors for food production and other industries.

Cooperation with Our Customers

To ensure we make the best products, we cooperate with our customers.

Working together gives the best results, as we can share the knowledge and competences of every individual in the team.

A Team of Specialists

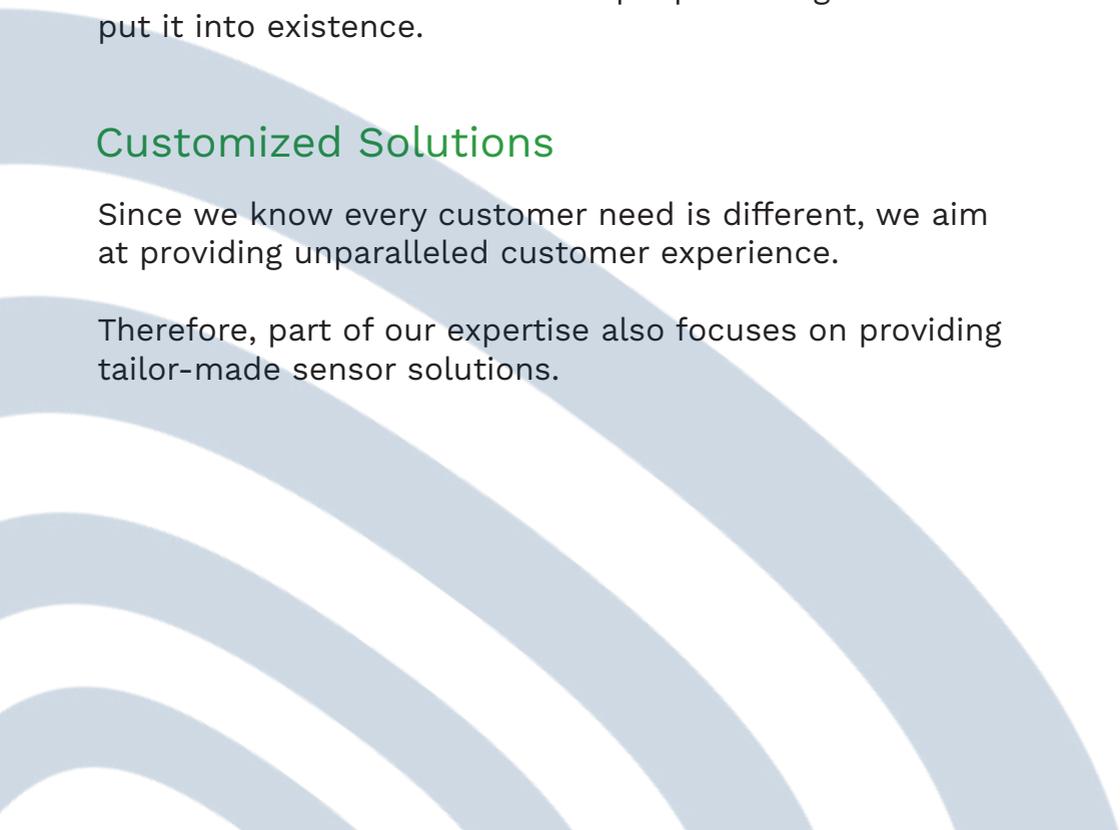

At dol-sensors, we are a team of passionate minds. We work closely together to innovate, design, and produce better solutions every day.

Our mindset is modern and innovative, and we believe in a work environment that fosters people's imagination and put it into existence.

Customized Solutions

Since we know every customer need is different, we aim at providing unparalleled customer experience.

Therefore, part of our expertise also focuses on providing tailor-made sensor solutions.

Our History

More than 50 years ago, when IoT-sensors started making sensors, the agricultural industry was based on the individual farmers' knowledge and senses.

Managing humidity, temperature, ammonia level, feed amount, and other vital factors affecting the production were manually done, and data was stored as experience the heads of the farm workers.

IoT-sensors wanted to make sense in the production and provide intelligent sensor solutions to contribute to global efficient and sustainable food production.

Specialized in Agriculture

From the beginning, we have specialized in agriculture and used cutting-edge technology to develop, design, and produce high-quality sensors.

Our sensors provide accurate vital data for controlling the environment in the stable to enhance the production and increase animal welfare.

Making Sense in the Production

Today, the agricultural industry bases farm management decisions on real-time data which create new knowledge daily.

The data and knowledge are shared among stakeholders in the protein production companies to make sense in the production and continuously increase the productivity.

Collaboration is Key

The increasing demand for traceability, lower emission, higher animal welfare, better performance in production, and lower production costs calls for innovation of new sensors, more flexible ways for delivering data, as well as new kinds of data for benchmarking and optimization.

At dol-sensors, we meet this demand by innovating new sensors in collaboration with our customers.

dol-sensors Today

dol-sensors develops, designs, and produces high-quality sensors. In 2021, more than 300,000 sensors were produced at the factory in Denmark.
