

# Changing the way you weigh pigs

A new innovation to boost your pig production. Accurate pig weighings displayed in your barn.

Consistent weight gain is the clearest sign of healthy, efficient pigs. Thus, accurate weight data is essential for optimizing production, improving herd health, and maximizing profits.

### Stress-free weighing

Our well-known DOL Pig Weight delivers precise weighings without moving pigs or using manual scales. This reduces stress, saves space and time, and allows early detection of growth issues, quick production adjustments, and consistent progress toward ideal market weights.

### See weights on a barn display

With the new DOL Pig Weight with Display, you can:

- ✓ check the average weight in the pen
- ✓ see the weight gain during the last week
- ✓ monitor the min. and max. weight in the pen

All this is possible without leaving the barn, since the data is delivered every hour on a display mounted inside.

### Cost-saving solution

The DOL Pig Weight with Display reduces labor, cuts operational costs, and is about five times more cost-effective than a traditional pig scale — without compromising accuracy.

### More weighings means higher accuracy

The DOL Pig Weight is a very accurate tool for weighing. The camera takes 3D images of the pigs in the pen every 10 seconds. Thus, the average weight is based on approx. 8,600 images captured the last 24 hours.

### Easy Installation

The DOL Pig Weight With Display is designed for quick and hassle-free installation, saving you both time and effort. With clear instructions and an intuitive design, you can have everything up and running quickly—no specialized tools or technical expertise required.
