

Know What's Happening in Your Barn

Wireless monitoring. Without the complexity.

Monitor temperature, humidity, CO₂, ammonia, and water consumption without extensive wiring or a dedicated farm controller. Sensor data is sent directly to your existing management system.

A Simpler Approach to Farm Monitoring

No Monitoring

Without continuous monitoring, important changes can go unnoticed for longer periods.

- x No continuous data
- x Problems discovered too late
- x Decisions without real data
- x Limited overview over time

Traditional Monitoring

Traditional monitoring often requires extensive cabling and a dedicated farm controller.

- x Extensive sensor wiring
- x Farm controller required
- x Higher installation complexity
- x More equipment to maintain

dol-sensors Monitoring Solution

Connect sensors wirelessly and send the data directly to your existing management system.

- ✓ Wireless LoRa connection
- ✓ No local internet required
- ✓ No farm controller needed
- ✓ Easy integration via API

Not sure which setup is right for you?

Talk to our Monitoring Solutions Specialist about your sensors, installation, and existing management system.
