

# Payment Acceptance

## Card Present

Transactions where the customer and the payment device are in the same location, and the card (or NFC device) is read directly by a certified terminal.

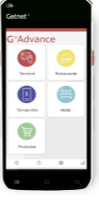

### Types of solutions

<p><b>Attended POS</b></p> <p>It is the classic point of sale where a cashier operates the terminal and guides the customer during payment.</p>	<p><b>Semi-Attended POS</b></p> <p>Self-service terminals where the customer initiates and completes the payment, but staff are nearby to assist if needed.</p>	<p><b>Unattended POS</b></p> <p>Fully autonomous devices with no staff in immediate proximity.</p>
<p><b>Mobile POS &amp; SPoC</b></p> <p>Portable POS devices or solutions where a smartphone or tablet plus a secure card reader is used to accept payments on the move.</p>	<p><b>SoftPOS</b></p> <p>Allows converting a common commercial device (like an Android phone) into a payment terminal through software.</p>	<p><b>Centralized CP Platforms / Architectures</b></p> <p>Architectures that connect and manage different terminal types through a single platform.</p>

### Card Present Products

<p><b>Get Classic</b></p>  <p>POS terminal for physical stores, providing a secure way to accept card payments and digital wallets.</p>	<p><b>Get Smart</b></p>  <p>Getnet Android-based point of sale (POS) terminal, designed for in-store card payments.</p>	<p><b>Tap on Phone</b></p>  <p>Turn your Android phone into a POS to accept contactless payments without a physical terminal.</p>	<p><b>Get Mini</b></p>  <p>Get Mini is a small reader that allows you to accept card payments from anywhere.</p>
--	--	--	---
