

Card Not Present - Regional Solutions

SEP Regional Card-Not-Present (CNP) is Getnet's unified digital payments platform that enables online and remote commerce across multiple countries via a single integration, eliminating the need for separate local connections, contracts, or operational models through three complementary solutions, all delivered from a centralized regional platform: API, Web Checkout & Pay by Link.

Card Not Present

In Card Not Present transactions the card is not physically presented or read by a POS terminal, but occur remotely and are processed through digital or back-office channels.
