

Card Present Solutions

Transactions where the customer and the payment device are in the same location, and the card (or NFC device) is read directly by a certified terminal.

Types of solutions

Attended POS

It is the classic point of sale where a cashier operates the terminal and guides the customer during payment.

Semi-Attended POS

Self-service terminals where the customer initiates and completes the payment, but staff are nearby to assist if needed.

Unattended POS

Fully autonomous devices with no staff in immediate proximity.

Mobile POS & SPoC

Portable POS devices or solutions where a smartphone or tablet plus a secure card reader is used to accept payments on the move.

SoftPOS

Allows converting a common commercial device (like an Android phone) into a payment terminal through software.

Centralized CP Platforms / Architectures

Architectures that connect and manage different terminal types through a single platform.

Card Present - Local Solutions Products

Get Classic

POS terminal for physical stores, providing a secure way to accept card payments and digital wallets.

Get Smart

A smart Android POS for in-store payments and business management.

Tap on Phone

Turn your Android phone into a POS to accept contactless payments without a physical terminal.

Get Mini

Compact card reader and mini-terminal designed to accept in-person card payments anywhere.

PinPad / TEF

Integrated payment solution that connects a merchant's POS with a secure PIN pad to streamline card transactions.

Get Central

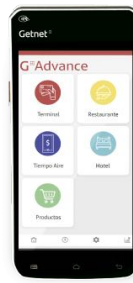

Integrated POS (Android) unifies sales management and payment processing into a single, all-in-one device.

Get Automatic

Unattended payment solution for self-service points, allowing secure and continuous operations without staff.

Get Advance

Compact and lightweight mobile terminal with unlimited connectivity, designed to optimize operations and take your business anywhere.

Get QR

Payment solution for processing transactions by scanning QR codes with mobile devices.

SEP Regional API Card Present

Enables in-store card payments
via a single SEP Direct API,
providing a standardized entry
point for consistent integration
across markets.
