RIP Sensor Detection Areas

Default Timer Setting

With sufficient natural light, the light keeps charging.

The light keeps 100% brightness for 0.5hour.

The light keeps 50% brightness when presence is detected in the 1st 4hours.

The light keeps 10% when there is no presence is detected after 30S hold time in the 1st 4hours.

The light keeps 20% brightness when presence is detected in the 2nd 4hours.

The light keeps 10% when there is no presence is detected after 30S hold time in the 2nd 4hours.

The light keeps 10% brightness for 3hours until the sunrise.

The controller recognizes day and night based on the Solar Array Open Circuit Voltage, this day/night threshold can be modified according to local light conditions and the Solar Array Used, setting range 3.0~8.0V
