

THE GLOBAL LEADERSHIP SUMMIT

How do we receive the Global Leadership Summit (GLS)?

The Global Leadership Summit is delivered via a high-quality online stream to your site. Beginning in the spring, we'll provide training videos, testing materials, stage/lighting support, and other resources to ensure your site is ready for a great GLS experience.

How do we make sure our site can stream the GLS?

Test Your Bandwidth

- Run a bandwidth test: <https://www.speedtest.net/>
- Minimum download speed of **20 Mbps**.
- Once you have run the speed test, please fill out this form: [Site Technical Information Form](#)
- Use a dedicated, hardwired connection (not Wi-Fi).

Make sure your computer meets the minimum recommended specifications.

- Windows 11 or macOS 11 (Do Not Update Software after mid-July)
- Latest Version of Chrome, Firefox, Safari, or Edge browsers.
- 8Gb RAM
- 1080 HD dedicated output (HDMI recommended)
- Note: ProPresenter is not supported for GLS streaming.

What setup should we use to present the GLS?

The GLS takes place over 2 days, featuring around 8 hours of content per day. When preparing for the GLS, consider both the expected number of guests and the size of the room. To ensure an optimal viewing experience for your guests, ask yourself: what setup will work best? Here are the suggested minimum specifications. (You can also substitute a comparable TV for this broadcast as well, applying the standard of a larger screen is best.)

Projector: A 6,000-7,000 lumens projector that is native HD (laser or DLP).

Screen: 16:9 widescreen (front or rear projection)

Screen Size: 9ft x 16ft minimum size

What training and support does the GLN offer as the GLS approaches?

As the GLS approaches, you'll receive:

- Training videos + downloadable resources
- Live + looped testing content
- Dedicated support from our team during event week
