

Viewing Instructions for a Summit View 6+ Group

How do we access the Global Leadership Summit (GLS)?

Registrations for your site are technically online registrations. A week prior to the Summit, every registration will receive an email with a watch link. To show the Summit, utilize a computer and one of the watch links.

How should we show the GLS with our group?

When preparing for the GLS, consider both the expected number of guests and the size of the room. To ensure an optimal viewing experience for your guests, ask yourself: what setup will work best? Here are the suggested minimum specifications.

Projector & Screen: 9ft x 16ft recommended size
Large Screen TV: 16:9 widescreen
Location: One screen, center of viewing area.

How do we make sure our group can stream the GLS without issues?

Test Your Bandwidth

Run a bandwidth test: <https://www.speakeasy.net/speedtest/>

We recommend a minimum download speed of 20 Mbps.

We recommend a dedicated, hardwired connection for the streaming computer as opposed to using WiFi as your primary connection to the internet.

Make sure your computer meets the minimum recommended specifications.

Windows 11 or macOS 11

Latest Version of Chrome or Firefox Browser (Edge, Safari, & others don't work well with our streaming platform)

8Gb RAM

Firewall

Test the watch link as soon as you receive a watch link to verify the URL isn't being stopped by a firewall. If so, add it to your safe sender list.
