

## Product Information

### Dhatura Panchang

Dhatura Panchang is a perennial shrub from the Solanaceae family, found in tropical and subtropical regions along roadsides and wastelands. It grows 1-1.5 meters with large dark-green leaves and white, trumpet-shaped flowers, bearing round, spiny seed capsules. Panchang refers to five plant parts—root, stem, leaves, flowers, and seeds—all used in traditional medicine, though the plant must be handled carefully due to its toxic nature.

### Dhatura alba

Jimson Weed

#### Active Ingredients

##### Dry Powder Extract

Active: 0.5% Alkaloids  
Ratio: 8:1

##### Soft Paste Extract

Active: 0.3% Alkaloids  
Ratio: 5:1

Part Used: Whole plant

#### Medicinal Uses

Dhatura alba is valued for its potent medicinal effects when used in small, controlled amounts. It contains active alkaloids like atropine, hyoscyamine, and scopolamine, which provide pain-relieving, antispasmodic, and anti-asthmatic benefits. Traditionally, various parts of the plant have been used to ease pain, reduce swelling, and treat respiratory problems such as asthma, cough, and bronchitis. It is also applied externally to help heal wounds, ulcers, and certain skin conditions due to its antimicrobial action. Since Dhatura is highly poisonous if misused, it should only be used under expert supervision to ensure safety and effectiveness.

Purity: 100%  
Shelf Life: 36 Months  
Size: 1kg, 5kg, 25kg  
Country of Origin: India
