HYOSUNG software

1. Homegrown solution suite
2. Simple offerings, faster deployment
3. Speed-to-market capability for non-traditional network elements
(i.e. Recycling expertise, Branch transformation solution expertise)

VS

Their softwares are :

1. No single platform, disparate architecture, big issues in cross-integration its multiple merged and acquired softwares
2. Inflexible even in minor changes, heavy professional service costs
3. Late-to-market, delivery issues in updates and upgrades

Remote Monitoring & Management Platform (KMS)

Remotely monitor, control and manage any size of ticketing kiosk network

- Collects real time status information for all connected terminals, servers, connected hosts.
- Provides online cash-in/out status and consumables availability.
- Forecasts cash outage and replenishment needs.
- Enables remote investigation of issues and troubleshooting.
- Automatically sends alerts through text messages or emails when critical events occur.
- Distributes and applies software updates automatically, over the network.
- Provides availability statistics, SLA compliance metrics and business performance reporting for the entire kiosks network.
- Accessible from anywhere using any browser.

Application Development & Backend Integration

Our trained SW team build a custom kiosk application integrated with your backend systems including:

- Securely communication with your backend systems using Web APIs, VPN connectivity or a hybrid model.
- Fetch, validate or insert data in your backend system directly.
- Initiate a custom workflow after a certain activity on the kiosk including integration with any 3rdparty systems.
- Design the application experience and UI
