

CYBER EAGLE

PROACTIVE PREDICTIVE PROTECTED

Continuous Risk Surface Monitoring

Why this matters now?

Cyber risk is no longer contained within IT systems.

Across industries, digital issues increasingly produce operational, regulatory, and trust consequences that leadership teams must answer for – often without having been shown the full picture.

As systems become more interconnected and long-lived, the cost of misunderstanding risk grows faster than the cost of addressing it.

This offering exists to address that gap.

A futuristic control room with a large wall display showing data and maps. The room is dimly lit with blue and orange ambient lighting. The display shows a world map, line graphs, and various data points.

What this is

A continuous service that tracks how cyber risk evolves across enterprise IT, cloud environments, remote access paths, and OT-connected systems.

The problem addressed

Risk rarely appears all at once. It accumulates through:

- New vendors
- Cloud expansion
- Remote access
- Legacy systems left untouched

Without visibility, leadership is surprised by exposure.

What it does

CRSM provides ongoing discovery and prioritization of risk..

- Identifies exposed assets
- Tracks changes in the attack surface
- Prioritizes risk based on potential impact

How it works

- Initial asset discovery
- Continuous monitoring for exposure changes
- Risk prioritization
- Regular executive reporting

What you receive

- Visibility into expanding risk
- Early warning before incidents occur
- Clear prioritization of remediation efforts

Who is this for

CISOs, risk leaders, and organizations undergoing growth or IT/OT convergence.

When organizations typically engage

Organizations engage when leadership recognizes that existing tools or reports no longer provide sufficient confidence, but before disruption forces reactive decisions.

This engagement is designed to:

- Create shared understanding
- Enable defensible decisions
- Reduce uncertainty at the executive level

It is intentionally scoped, proportionate, and designed to fit where the organization is today.
