

CYBER EAGLE

PROACTIVE PREDICTIVE PROTECTED

Identity & Privilege Control as a Service

Why this matters now?

Cyber risk is no longer contained within IT systems.

Across industries, digital issues increasingly produce operational, regulatory, and trust consequences that leadership teams must answer for – often without having been shown the full picture.

As systems become more interconnected and long-lived, the cost of misunderstanding risk grows faster than the cost of addressing it.

This offering exists to address that gap.

What this is

A managed service that ensures identity and privileged access remain intentional, controlled, and auditable across enterprise IT and OT environments.

The problem addressed

Most breaches involve misuse of identity or excessive privilege. Access often grows unmanaged over time.

What it does

IP-CaaS manages identity risk continuously.

- Controls privileged access
- Monitors identity misuse
- Enforces access policies
- Produces audit-ready evidence

How it works

- Identity and privilege review
- Baseline definition
- Continuous monitoring and enforcement
- Executive and audit reporting

What you receive

- Reduced identity-based risk
- Improved audit posture
- Clear accountability for access

Who is this for

Organizations with complex access requirements, third-party users, or hybrid IT/OT environments.

When organizations typically engage

Organizations engage when leadership recognizes that existing tools or reports no longer provide sufficient confidence, but before disruption forces reactive decisions.

This engagement is designed to:

- Create shared understanding
- Enable defensible decisions
- Reduce uncertainty at the executive level

It is intentionally scoped, proportionate, and designed to fit where the organization is today.
