

CYBER EAGLE

PROACTIVE PREDICTIVE PROTECTED

Incident Readiness & Executive Response Program

Why this matters now?

Cyber risk is no longer contained within IT systems.

Across industries, digital issues increasingly produce operational, regulatory, and trust consequences that leadership teams must answer for – often without having been shown the full picture.

As systems become more interconnected & long-lived, the cost of misunderstanding risk grows faster than the cost of addressing it.

This offering exists to address that gap.

What this is

An executive-focused program that ensures leadership teams are prepared to make correct, timely decisions during major cyber incidents.

The problem addressed

Most organizations have incident plans – but they are untested at the executive level.

In real incidents, failure often occurs in:

- Decision-making
- Authority clarity
- Communication under pressure

What it does

IRERP prepares leadership for real-world cyber crises.

- Tests executive readiness through realistic scenarios
- Clarifies roles, authority, and escalation paths
- Identifies decision and communication gaps

How it works

- Executive intake and scenario selection
- Review of existing plans
- Facilitated tabletop simulations
- Post-exercise remediation roadmap

What you receive

- Tested executive response capability
- Clear decision frameworks
- Identified gaps before an incident occurs
- Practical improvements to response readiness

Who is this for

Boards, executive teams, critical infrastructure and high-impact organizations.

When organizations typically engage

Organizations engage when leadership recognizes that existing tools or reports no longer provide sufficient confidence, but before disruption forces reactive decisions.

This engagement is designed to:

- Create shared understanding
- Enable defensible decisions
- Reduce uncertainty at the executive level

It is intentionally scoped, proportionate, and designed to fit where the organization is today.
