

Third party assurances for the production,
processing and sourcing of beef through certified
supply chains in Canada.

CRSB Certified beef producers can use their certification to meet the AgrilInvest risk assessment requirements

September 16, 2025, Calgary AB. - The Canadian Roundtable for Sustainable Beef (CRSB) is pleased to share that its certification program is one of the tools recognized as an agri-environmental risk assessment (AERA) under Agriculture and Agri-Food Canada's AgrilInvest program. All CRSB Certified beef producers that require an AERA to participate in AgrilInvest can leverage their certification to qualify for the government contribution.

"The CRSB is pleased that the AgrilInvest program recognizes the work producers have undertaken to get certified and that producers can now leverage their certification for this program. It's just one more value-add of the CRSB Certified program for Canadian beef producers," says Don Badour, Chair of the CRSB Certified Framework Committee and CRSB Certified Ontario beef farmer.

AgrilInvest is part of the current suite of risk management programs under the Sustainable Canadian Agricultural Partnership, the current federal-provincial-territorial agricultural policy framework.
