

Connecting economies:

Methodology

CONNECTIVITY: THE THEORY

Connectivity is critical to enabling economic expansion and cluster development, to ensure accessibility to key centres and enabling and attracting labour supply growth, and the sustainability of existing and new communities.

Broadly, there are two ways in which improved connectivity can unlock economic growth.

Static impacts are those which capture the various direct effects on existing firms and residents:

For firms:

- Reduction in costs of shipping and freight movements
- Reduction in costs of business travel
- Access to a larger labour pool, as previously unattractive commuting movements become more viable
- Access to a larger pool of customers in physical attendance at premises

For residents:

- Interventions that improve speed, safety and reliability of local transport networks and reduce congestion and pollution
- Improvements in inter-regional or inter-national connectivity provides local residents with better access to tourism and recreation opportunities
- Increases in access to employment opportunities, providing residents with a greater choice and selection of jobs
- Increased access to education and training opportunities

Dynamic impacts are the subsequent impacts of new economic activity entering a local market as a result of better transport connectivity. Their long-term effects can significantly outweigh the scale of the initial static effects:

- Firm-worker proximity benefits: Positive feedback between the presence of workers with specific skills, and firms that require said skills
- Firm-firm proximity benefits: The co-evolution of sector value chains, with the presence of downstream actors attracting upstream suppliers, and vice versa, or firms in similar sectors co-locating/clustering
- Agglomeration-growth cycle: whereby the productivity and competitiveness benefits of co-location allows firms to win greater market share and expand operations (see right)
- Some of the other induced effects of dynamic impacts include an increase in property prices (often seen as a negative) and an increased amount of money spent locally by better-paid workers (generally seen as a positive)

Productivity and agglomeration

A key theme for the EEH region is improving productivity: the ways in which individual workers are able to produce more, or higher quality, output, as measured by the revenues the firm is able to capture less the direct costs of the inputs. Some obvious reasons for productivity growth might be: more skilled workers, better equipment, and smarter processes. Some less obvious, but equally important, reasons might be lower costs of inputs and higher prices of outputs, both of which may be a result of local economic conditions, or the firm's increased market power.

One of the most important ways in which transport systems help drive productivity growth is through agglomeration. Agglomeration benefits are the benefits that firms experience from being connected to, and interacting with, a wide number of other economic actors. This brings two benefits: efficiency, and innovation.

Agglomeration drives efficiencies through economies of scale and matching benefits. Firms that are able to access and serve larger markets, and have greater choice of suppliers and workers are often able to run their businesses more efficiently than those with smaller markets and more limited choices. This boosts revenue, decreases costs, and helps productivity grow.

Agglomeration also helps firms innovate, through expanding the network of contacts with which they are able to interact. This helps them access the knowledge and ideas that they can use to improve their business. Innovation is a major driver of productivity; in fact, many of the most beneficial ways we conceive of productivity growing, be it through better equipment, a more efficient workflow, or a better end-product, are forms of innovation. Helping firms invest and innovate, either directly or by creating the right incentives and conditions, is probably the main way of driving productivity growth in the long-run.

Datasets: Datasets (see following page) used were the most recent available during spring 2024. Cambridge Econometrics used middle layer super output area (MSOA) level data, rather than local authority-level data. This was necessary as the corridors and areas within these brochures do not necessarily conform to local authority boundaries. However, MSOA data is not updated by ONS as regularly or as quickly as local authority-level data – hence why in some cases it may appear there is more recent data available, but this would be at a local authority rather than MSOA level.

Use of pre-Covid data: Throughout the brochure Cambridge Econometrics has used a mixture of pre-and-post Covid data. Pre-Covid data is used to assess the longer term trends and performance of an area, avoiding the significant distortion of the pandemic on the data.

Definition of sub-areas: Cambridge Econometrics defined 18 ‘sub-areas’ across the EEH region, using workplace density and commuter zone analysis from ESRC-commissioned research. The areas are separate from administrative boundaries, using MSOA geographies. Where an area is ‘ranked’ in comparison to other EEH areas, it is therefore out of a total of 18 areas within EEH. The full list of MSOA areas which make up each sub-area are available in this document.

Definition of sectors: Cambridge Econometrics has identified sectors using standard industrial classification (SIC) codes, held by the Office for National Statistics (ONS). Businesses self-report the most appropriate SIC code for their area of focus. There are hundreds of SIC codes, each representing a specialism, and Cambridge Econometrics has grouped these together to form sectors. By its nature, this requires a degree of judgement on the part of Cambridge Econometrics as what specific activities form a sector: classifying sectors, particularly those involved in science and technology innovation, is as much an art as it is a science. The full list of SIC codes which make up a given sector is available in this document. We have also printed below the job totals identified by Cambridge Econometrics for all sectors in the EEH economy.

Capability	Sector	Jobs in EEH (2022)	Jobs in England (2022)	EEH % of national (2022)
Foundational	Accommodation	24,900	370,300	7%
Prime	Advanced Physics & Engineering	253,000	2,098,500	12%
Prime	Agri-food	71,100	785,500	9%
Foundational	Arts & Recreation	82,300	884,500	9%
Foundational	Business Support Services	283,000	2,260,800	13%
Enabler	Chemicals & Materials	38,000	352,300	11%
Prime	Circular Economy	22,600	206,400	11%
Enabler	Construction	141,700	1,300,500	11%
Prime	Digital & Creative	139,300	1,426,600	10%
Enabler	Electricity	4,200	79,800	5%
Enabler	Finance	59,800	940,600	6%
Foundational	Healthcare	184,400	2,232,500	8%
Prime	Higher Education	97,800	719,800	14%
Foundational	Hospitality	158,800	1,841,700	9%
Enabler	Legal & Accounting	49,500	704,000	7%
Prime	Life Sciences	79,400	320,500	25%
Prime	Logistics & Freight	140,700	1,081,800	13%
Enabler	Management & Social Science	110,600	1,123,300	10%

Capability	Sector	Jobs in EEH (2022)	Jobs in England (2022)	EEH % of national (2022)
Enabler	Metal Products	35,800	416,100	9%
Enabler	Mining & Extraction	3,300	66,000	5%
Foundational	Primary & Secondary Education	179,000	1,774,000	10%
Foundational	Public Administration	79,100	1,173,000	7%

Prime total	-	803,900	6,639,100	12%
Enabler total	-	547,100	6,075,400	9%
Foundational total	-	1,332,000	14,432,200	9%
All capabilities	All sectors	2,683,000	27,146,700	10%

The section provides data sources and definitions for the key data insights provided in this report.

EEH region insights

All EEH region insights are provided at the EEH STB geography (unless specified otherwise). These are typically compared to the other STB geographies in England, as defined at the time of writing (spring 2024). The ‘rest of England’ is England less the EEH geography. National averages are for the entirety of England unless otherwise stated.

The following tables outline the key datasets used to inform and evidence these EEH region insights, including sources and definitions. Any findings not referenced in the below tables have been sourced from EEH’s own research and evidence base (notably it’s Transport Strategy, available online [here](#)).

Economy datasets

Indicator(s)	Source (and link)	Key terms/definitions
Jobs	ONS Jobs density (link)	Job creation defined as CAGR between 2011-19
Economic growth	ONS Regional gross domestic product (link)	Uses ‘real terms’ i.e. CVM measure
Productivity	ONS Subregional productivity (link)	Per job measure used for productivity growth
Exports	ONS International trade in UK nations, regions and cities (link)	Exporting intensity defined as exports per job
Foreign-owned firms	TfN Research and Innovation in the North of England (link)	
Firms, enterprise and survival	TfN Research and Innovation in the North of England (link)	Enterprise rates defined as business births as a % of total active businesses in base year
Floorspace delivery and costs	VOA Non-domestic rating (link)	Costs are proxied by average rateable values (RV) per m2 of floorspace
Broadband coverage	Ofcom Connected Nations (link)	For commercial premises only
‘Primes’ and key sector etc. jobs	ONS BRES (link)	Sectors and ‘primes’ etc. classifications ‘look-ups’ used can be examined in full on the EEH website.

Environment datasets

Indicator(s)	Source (and link)	Key terms/definitions
CO2 emissions	DESNZ UK local authority and regional greenhouse gas emissions national statistics (link)	
Agricultural land use	DEFRA Structure of the agricultural industry in England and the UK (link)	

Social datasets

Indicator(s)	Source (and link)	Key terms/definitions
Population and age profile	ONS Census 2021 (link)	Old-aged dependency ratio defined as % share aged 65+
Housing	VOA Council Tax: stock of properties (link)	Housing delivery defined as ratio of net additional dwellings relative to total dwellings in base year
Housing affordability	House prices: ONS House price statistics for small areas (link) Incomes: ONS Income estimates for small areas (link)	Affordability defined as ratio between average (mean) annual house price and average (mean) annual net household income (before housing costs)
Household incomes	ONS Income estimates for small areas (link)	Uses annual net household income (before housing costs) measure. Converted to 'real terms' using CPIH
Deprivation	MHCLG IMD 2019 (link)	'Neighbourhoods' refers to individual LSOAs
Poverty	ONS Small area model-based households in poverty estimates (link)	Uses 'relative' poverty measure, after housing costs
Qualifications	ONS Annual Population Survey (link)	Higher education qualifications defined as NVQ4+/RQF4+
Employment and unemployment	ONS Annual Population Survey (link)	Employment rates 16-64, unemployment rates 16+
Broadband coverage	Ofcom Connected Nations (link)	For residential premises only
Halifax quality of life survey	TfN Research and Innovation in the North of England (link)	

Technology datasets

Indicator(s)	Source (and link)	Key terms/definitions
R&D intensive jobs	ONS BRES (link)	R&D intensive jobs defined as those in OECD medium+ R&D intensive industries
Patent generation and rankings	WIPO Global Innovation Index Clusters Data (link)	Patent data is a sum over 5-year period
Innovation clusters (and characteristics)	DSIT Innovation Clusters Map (link)	DSIT data only considers 'established' innovation clusters, typically those with 30+ firms
R&D and innovation share	TfN Research and Innovation in the North of England (link)	Derived from LEP-level estimates, so includes all of Swindon and Wiltshire for EEH
Research staff	TfN Research and Innovation in the North of England (link)	Derived from LEP-level estimates, so includes all of Swindon and Wiltshire for EEH
Innovate UK funding	TfN Research and Innovation in the North of England (link)	Derived from LEP-level estimates, so includes all of Swindon and Wiltshire for EEH

Individual sub-area insights (including in Where's Where section and Digital Connectivity page)

The majority of sub-area insights have been informed by MSOA-level datasets. National averages are for the entirety of England unless otherwise stated.

The following tables outline the key datasets used to inform and evidence these sub-area insights, including sources and definitions. Any findings not referenced in the below tables (notably key economic assets) have been informed by local stakeholders own research and evidence base, shared during the stakeholder engagement process.

Business market datasets

Indicator(s)	Source (and link)	Key terms/definitions
Jobs	ONS BRES (link)	Job creation defined as CAGR between 2011-19
Economic growth	ONS UK small area gross value added estimates (link)	Uses 'real terms' i.e. CVM measure. MSOA GVA converted to CVM using respective local authority area deflator (from here)
Productivity	Estimated by interacting above two datasets (i.e. GVA – from UK small area gross value added estimates – by jobs – from BRES)	Uses 'real terms' i.e. CVM measure. MSOA GVA converted to CVM using respective local authority area deflator (from here)
Firms and enterprise	ONS UK Business Counts (link)	Enterprise rates defined as net additional enterprises as % of total active enterprises in base year. Micro-sized defined as 0-9 employees
Floorspace delivery and costs	VOA Non-domestic rating (link)	Costs are proxied by average rateable values (RV) per m2 of floorspace. Delivery rates defined as ratio of net additional floorspace relative to floorspace in base year
Broadband coverage	Ofcom Connected Nations (link)	For commercial premises only
'Primes' and key sector etc. jobs	ONS BRES (link)	Sectors and 'primes' etc. classifications 'look-ups' used can be examined in full on the EEH website.
R&D intensive jobs	ONS BRES (link)	R&D intensive jobs defined as those in OECD medium+ R&D intensive industries
Patent generation and rankings	WIPO Global Innovation Index Clusters Data (link)	Patent data is a sum over 5-year period
Innovation clusters (and characteristics)	DSIT Innovation Clusters Map (link)	DSIT data only considers 'established' innovation clusters, typically those with 30+ firms

Labour market datasets

Indicator(s)	Source (and link)	Key terms/definitions
Population and age profile	ONS Census 2021 (link)	Old-aged dependency ratio defined as % share aged 65+
Housing	VOA Council Tax: stock of properties (link)	Housing delivery defined as ratio of net additional dwellings relative to total dwellings in base year
Housing affordability	House prices: ONS House price statistics for small areas (link) Incomes: ONS Income estimates for small areas (link)	Affordability defined as ratio between average (mean) annual house price and average (mean) annual net household income (before housing costs)
Household incomes	ONS Income estimates for small areas (link)	Uses annual net household income (before housing costs) measure. Converted to 'real terms' using CPIH
Deprivation	MHCLG IMD 2019 (link)	'Neighbourhoods' refers to individual LSOAs
Poverty	ONS Small area model-based households in poverty estimates (link)	Uses 'relative' poverty measure, after housing costs
Qualifications	ONS Annual Population Survey (link)	Higher education qualifications defined as NVQ4+/RQF4+. Unskilled defined as no or RQF1 qualifications only
Skilled work	ONS Annual Population Survey (link)	'Skilled work' defined as those working in SOC codes 1-3 and 5
Employment and unemployment	ONS Annual Population Survey (link)	Employment rates 16-64, unemployment rates 16+
Economic inactivity and reasons	ONS Annual Population Survey (link)	
Broadband coverage	Ofcom Connected Nations (link)	For residential premises only

CONNECTIVITY SECTION DEFINITIONS

Definitions and sources for Connectivity Today section

Congestion map: Full definition

To produce the map, City Science first analysed INRIX data to provide an indication of average road speeds by car for various road types (eg dual carriage, single carriageway) across the entirety of the EEH motorway, A and B road network between on a weekday morning. Individual sections of road were then given a rating reflecting how their average speed compared to the EEH average for that road type. Analysis conducted uses the weekday morning peak period (i.e. 0700-1000) in June 2022. The vehicle type “car” was analysed as a proxy for understanding network performance. The full list of speeds (in mph) and scores is in the table below.

Road Type	A	B	C	D	E	F
Single Carriageway	>46	>36	>28	>24	>20	<20
Dual Carriageway / Motorway	>66	>59	>43	>30	>23	<23
Traffic Island Link	>41	>32	>26	>23	>20	<20
Roundabout	>38	>33	>29	>26	>23	<23
Traffic Island Link at Junction	>36	>31	>26	>22	>19	<19
Slip Road	>53	>45	>39	>33	>24	<24

Public Transport Catchment map:

The map, by City Science, makes a number of assumptions. Walking speed is 3mph as standard, though this can vary depending on incline. For calculating journeys by rail and bus, the period 7am-10am (weekday) has been divided by the number of services within that period to give a ‘headway’. The average wait time is half the value of the headway (ie, the time you’d wait if you arrived exactly halfway between two train/ bus services). The travel time is the average across all services between 7am and 10am (ie, if there is a mixture of fast and slow services to a destination, it is an average of these). These assumptions ensure the map gives a balanced view of journey times, however it may not reflect the fastest possible time it would take to get to a destination. Example:

There are 12 services between Place A and Place B from 7am to 10am, equating to one service every 15 minutes. The average wait time is therefore 7.5 minutes. Half of the services are ‘express’ and take 30 minutes to get to Place B, the other half are ‘stoppers’ and take one hour. Therefore, the average journey time is calculated as 45 minutes. In this scenario, the total ‘journey’ would be 52.5 minutes, plus the time it would take to walk to a station/ stop from the starting / finishing position. The bus and rail timetable information comes from the Bus Open Data Service (BODS) and Rail Delivery Group respectively.

Statistical lookups

A number of statistical lookups have been used to inform and shape the analysis. Included in this section are lookups for: business sectors (and associated 'prime' etc. classification) and sub-areas.

Business sector and 'prime' etc. SIC lookup
