

MOBILE DEVELOPER

📍 Škofljica | 🌐 40+ countries | 💻 SaaS B2B

At OCEAN EV Charging Platform, we develop a software solution that powers the e-mobility of the future — connecting thousands of charging stations, millions of vehicles and countless successful charging operations worldwide.

We are a B2B SaaS product used by the largest energy companies, car manufacturers and global players in the field of sustainable mobility.

We are now looking for a Mobile Developer who has a sense for clean architecture, responsive interfaces and enjoys the fact that every move in the application ends in the real world - with a vehicle being charged. ⚡

If you like writing clean, efficient and stable code - the kind that survives QA testing - then read on.

🚀 What you will do

- Develop and maintain mobile applications (React Native) that are connected to our SaaS platform.
- Participate in the development of core functionality for managing the charging infrastructure.
- Wrote clean, efficient and testable code (because we know that refactoring is always close).
- Interacted with the backend (REST APIs, WebSockets), UI team and product.
- Participated in optimizing performance, stability and security of applications.
- Was an active part of the Scrum team - from sprints to code reviews.

🧩 What we expect

- Experience with developing mobile applications in a React Native environment.
- Good understanding of mobile architecture, application state, asynchronous processes.
- Understanding of API integrations, asynchronous programming and state management.

- Experience with CI/CD, Git, Docker.
- Basic understanding of network protocols and communication security (ISMS, CIA).
- Self-initiative, curiosity and the ability to see things through to the end.
- Active knowledge of English.

Bonus points if:

- You have experience connecting to devices via mobile phone.
- You have experience with multi-tenant or white label applications.
- Knowledge of testing tools (Appium).
- Interest in UX/UI and user experience.

 What you get

- Working on a global SaaS product that is changing the way the world uses electric vehicles.
- Direct impact – your code will literally power the energy of the future.
- A team that values clean architecture, healthy debates about technology and good humor.
- Flexible work (combination of home and office, after a successful trial period).
- Opportunity to grow with us – both technically and personally.

 Send us your CV in English to: careers@oceanevcharging.com with the subject "OCEAN – Mobile developer".
