

TEST ENGINEER / QA ENGINEER

📍 Škofljica | 🌍 40+ countries | 💻 SaaS B2B

OCEAN EV Charging Platform

Škofljica | Hybrid work | Global product

OCEAN EV Charging Platform is one of the leading IT solutions for smart charging infrastructure management, operating in more than 40 countries. We are the ones driving electric mobility from Greenland to Australia.

If you've ever plugged in an EV and thought: "someone must have programmed this really well" - yes, it's us (among others).

Now we're looking for someone who will make sure that everything we do runs as smoothly as a fully charged battery.

If you're interested in testing the software that manages thousands of charging stations around the world, then read on.

No, you won't "just test". You will be a QA navigator in a team developing one of the most advanced

SaaS systems for e-mobility:

- You will check if our applications respond as quickly as Tesla at a green light.
- You will build and automate tests (API, UI or mobile applications).
- Program tests in Python and compile them in YAML or Robot Framework).
- Chase edge cases and make sure our users get only the best version of

OCEAN.

- You will collaborate with development, product and support - because we believe that quality is created in the team, not at the end. And yes, you will also test electric vehicle charging protocols - which means that you will be literally "in the flow" sometimes.

What we expect from you

- Experience with manual and automated testing.
- Sense of structured thinking and recognition of critical scenarios.
- Knowledge of APIs, SQL, GIT,.

- Basics of Python and programming (and the desire to upgrade it).
- Understanding of how the web works and how SaaS systems are designed (BE, FE, DB,...)
- Dare to use AI tools thoughtfully.
- And above all: curiosity, accuracy and team spirit.
- Active knowledge of English.

If you have a technical education and 4 years of experience in a similar position, great.

If you have less, but you are fast, like to explore and learn – even better.

What we offer you

- The opportunity to work on a global SaaS product that is changing the way the world is filled.
- Work in an international environment, in a team where QA is not necessarily evil, but a key part of the story.
- Lots of space for learning, experimentation and personal development.
- Flexible work – a combination of home and office in Škofljica after a trial period.
- Good coffee, fruit and regular table tennis matches (seriously – QA vs. dev team is a classic).
- And, of course, the feeling that you are doing something that has a serious impact.

To keep our system stable, fast and reliable, we are looking for a Test Engineer (QA Engineer) to join our team who sees the beauty in robust tests, loves to explore edge cases and believes that quality is the result of team spirit. Is this you?

 Send us your CV in English to: careers@oceanevcharging.com with the subject "OCEAN - QA".
