

Project Portfolio

Total Visibility. Smarter Decisions. Better Results.

For project leaders and PMOs who want control, not chaos.

Why Hypergene Project Portfolio

Hypergene Project Portfolio helps you take control of all projects in one place. Get a clear overview, align initiatives with strategy, and ensure resources, budgets, and timelines stay on track. With integrated support for prioritization, risk management, and follow-up, you can make smarter decisions and maximize the value of your project investments. AI-powered insights further enhance risk assessment and prioritization, helping you make faster, data-driven decisions.

Project management teams today face increasing pressure to do more with less. They are expected to improve productivity, elevate efficiency, and reach new levels of growth – all while working with fewer resources, across tighter timelines, and in increased complexity.

Many still rely on spreadsheets and disconnected tools to manage their projects, resulting in lots of manual processes, unclear priorities, and reactive decision-making.

Project Portfolio Enables:

Strategic alignment:

Prioritize the right projects and ensure they support company business goals.

Real-time visibility:

Track project status, risks, budgets, and timelines in one shared view.

Smarter resource planning:

Manage team capacity across projects and portfolios efficiently, with integrated Gantt charts that let you view resource allocation alongside project schedules.

Proactive risk & issue management:

Identify problems early and take action before they escalate.

Easy reporting:

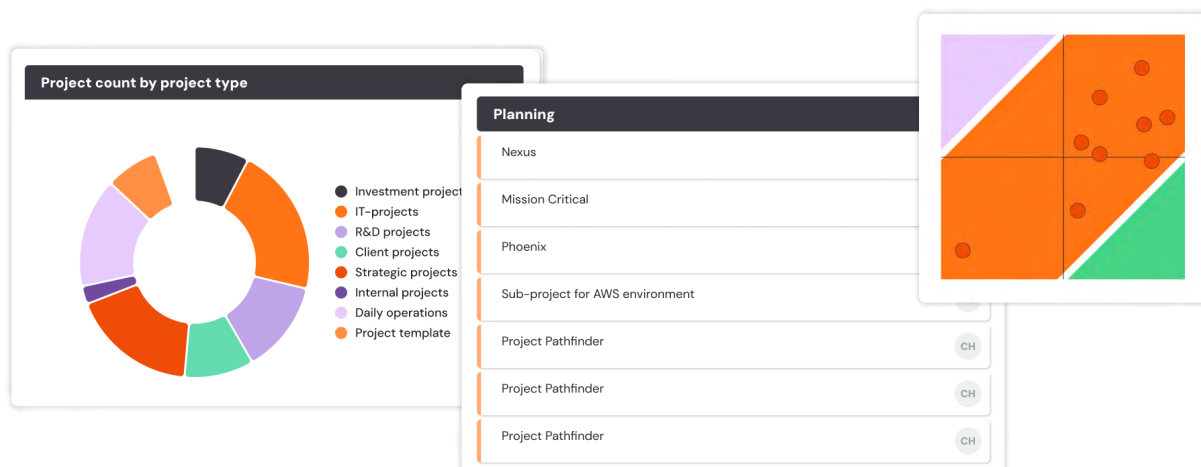

Generate new reports directly within the tool and view them on dashboards, with access to over 800 pre-built report templates.

User management:

Apply role-based access and consistent workflows across all projects.

Compliance & security:

We process your personal data in accordance with the EU General Data Protection Regulation (GDPR). Our operations are guided by the ISO 27001 security certificate, and the service is delivered securely via a cloud platform.

What Makes Project Portfolio Work for PMOs

Project Portfolio is specifically tailored to the fast-paced environment of projects. Here are six reasons why PMOs and project leaders love it.

1.

Project prioritization and evaluation

Prioritize based on impact, cost, benefit, and risk. Use pre-built or custom criteria to support better executive decision-making.

2.

Centralized resource planning

View workloads across all projects and plan by role or individual. Integrate with timesheets, capacity overviews, and a unified scheduling view that connects resource planning with Gantt timelines.

3.

Agile + Traditional Project Support

Manage both agile and waterfall initiatives. Track epics, user stories, milestones, and financials all in one place.

4.

Visual and intuitive interface

Navigate your entire portfolio with color-coded dashboards, drag-and-drop filters, and personalized views – no training needed.

5.

Transparent reporting and dashboards

Provide stakeholders with the insights they need, from one-page summaries to executive dashboards, supported by over 800 customizable report templates.

6.

Seamless integrations

Easily connect with tools like Jira, MS Teams, SAP, Power BI, ServiceNow, and more. Keep your ecosystem in sync without switching tools.

Work Faster – With Built-in AI

Let our built-in AI do the heavy lifting – so you can get more done, even faster. Our AI functionality consists of three features: AI Search, AI Summary, and AI Chat. These features help you quickly find information across large data sets, identify patterns, trends, risks, and anomalies – and even discover new business opportunities.

Hypergene Portfolios AI Wizard is based on the Microsoft Azure OpenAI language model and is hosted entirely within the EU/EEA. Customer data is never used to train the model, nor is it shared between customers. All queries and responses are logged securely within your own database and are used solely for error correction, misuse detection, and further development.

Thinking Bigger?

If you're looking beyond Project Portfolio, Hypergene Portfolios HUB lets you combine the data models of different Portfolios — for example, Risk, Application, Idea, and Sustainability Portfolios — all in one connected platform.

HUB also offers centralized features such as access management, resource overview, time tracking, task progress monitoring, and cross-Portfolio reporting — giving you a single control center for your entire Portfolio ecosystem.
