

RHIZOSORB®

Performance Summary

Illinois

Repeatable On-Farm Results

RhizoSorb is a more efficient phosphate fertilizer. Its patented technology delivers up to 2x more plant-available nutrient at a lower application rate. Because the nutrient is more available, growers can apply less fertilizer and maintain strong yields – reducing upfront fertilizer costs and improving ROI.

Validated Performance

18 on-farm trials in both corn and soybeans

5 years of on-farm data

Each trial consisted of a replicated, side-by-side, field-scale comparison between a grower's standard practice (GSP) phosphate program (typically MAP) and RhizoSorb applied at a 50% reduction in P_2O_5 relative to GSP.

102.3%

average relative yield with RhizoSorb, compared to grower standard practice across all trial locations in Illinois.

On-Farm Corn Trials: Yield Data

On-Farm Soybean Trials: Yield Data

■ GSP 100% P ■ RhizoSorb 50% P

At a 50% reduction in phosphorus, RhizoSorb maintains or improves yield at an average 10% lower cost per acre.
