THIS GAME WAS MADE IN 5 DAYS, TELL ME WHAT YOU THINK :D THIS GAME IS A REMAKE OF THE ORIGINAL (I AM IN NO WAY AFFILIATED WITH THE ORIGINAL CREATOR OF THE GAME) BE AWARE OF DISTURBING AND SENSITIVE IMAGERY USE WASD TO MOVE AND SHIFT TO RUN WALK THROUGH HELL AND SUFFER JOIN MY PATREON - Get exclusive access to music, art, and interactive experiences made by me, along with early access to my work, special recognition, and the ability to be a part of my amazing community!Download NowName your own priceClick download now to get access to the following files: Ask the publishers to restore access to 500,000+ books. Description Sad Satan is a deep web horror game full of mazes that contain disturbing images. This is the virus free version, so everything is censored out and I haven't encountered any threats so far. «Download: Although this is the clean files, I'll say download at your own risk b/c you never know where the viruses are hiding. AboutScreenshots 2Games like 81ReviewsComments Content Warning! The following work contains content and material that some may find shocking. Reader discretion is advised. Legal Note Please do not provide any links to this screamer/shock site since it is illegal to distribute in the vast majority of countries. Learn more A screenshot of the game. Sad Satan is a shock horror game built with the Terror Engine. It was first reported by the channel Obscure Horror Corner (also known as Jamie Farrel) on June 25, 2015, in a series of five videos. Due to its dark nature, it was covered by a number of different publications, spawning a subreddit community to discuss the game further. Sad Satan was also known for its unofficial, far more disturbing "true" version. History and publications A snapshot of the 4chan thread from a user named ZK, who claimed that OHC has not shown the "true" version of the game. After its release, several publications covered the Sad Satan game in an attempt to uncover its mysterious origin. Notably, Kotaku, a video game blog, interviewed the owner of Obscure Horror Corner, who received a tip from an anonymous subscriber to download the game. The subscriber claimed to have found the game on a forum posted by a user known only as "ZK." [1] After Kotaku's interview with the owner of Obscure Horror Corner, a subreddit called r/sadsatan was created on Reddit to discuss the game's origin and lore. Jamie Farrel later disclosed the .onion address where the game was allegedly found, but users discovered that the link had invalid characters. In a subsequent Kotaku interview published three days later, Farrel admitted that he had intentionally provided an incorrect link because the game contained graphic material and he did not want to be held responsible for distributing it. However, it was later discovered that no such material existed in either the game or the video. On July 7, 2015, an anonymous user claiming to be ZK posted a thread on 4chan, alleging that the original "Sad Satan" version covered by Obscure Horror Corner was not authentic.[2] The post included a download link to a new version, which contained graphic content including gore and child sexual abuse material. However, users who downloaded this version reported that it caused their computers to become unresponsive and was discovered to have a trojan installed with it. One user even noted that attempting to play the game from a USB drive instead of their computer's hard drive caused their computer to fail to boot normally. After some time, the FBI actually investigated this game and ended up banning all download links. Attempting to copy and paste the MEGA link will give an error screen saying that the file was removed for violating the MEGA ToS. Content In both "Sad Satan" games, The player controls their character through the hallway of monochromatic corridors while various audio samples play. These audios include interviews with various murderers and child predators, including Jimmy Savile and Charles Manson, as well as musical excerpts like "I Love Beijing Tiananmen." While the player controls their character through the hallway, images will intermittently appear, preventing their progress in the game. Most of these images often include references to child abuse, particularly those of Jimmy Savile and Rolf Harris. A picture of the convicted child rapist and necrophile Tsutomu Miyazaki was among the other images that dealt with crime. Photographs of Lady Justice, the late Colombian footballer Andrés Escobar, and the late John F. Kennedy before his assassination is also included. In the gameplay video for the original Sad Satan the player can be seen moving slowly down the hallway. After some time, a girl can be heard counting from 1 to 10 in German. This audio was produced by a Polish number station called Swedish Rhapsody, which was used to transmit messages in code. At 7:39, the game freezes, and KMFD's Lynch Mob begins to play over loud white noise and distorted audio. Just before the video ends, a reversed version of Led Zeppelin's "Stairway to Heaven" can be heard, along with the chant "Sad Satan" and a brief glimpse of Jimmy Saville and the late former British Prime Minister Margaret Thatcher. A photograph of Franz Joseph's work also appears. In Part 2, the video features gameplay mostly accompanied by a slowed-down Hitler speech in the background until it silences and the corridor alters into black-and-white. Later, the player sees a child in the hallway, and when he passes through it, a loud scream is played in reverse, and the video ends there. In some parts, an image of the late former president John F. Kennedy right before he was shot is briefly shown. In Part 3, Charles Manson's interview can be heard at the beginning, followed by a slightly slowed-down voice saying, " I live where there's no TV, no radio, no electric lights..." The game concludes with a reversed, distorted audio clip of "I Love Beijing Tiananmen" playing while it freezes on the screen. In the fourth part, before the original Tsutomu Miyazaki appears in the middle of the video, an image of him is briefly displayed with his eyes drawn in red. A picture of Lady Justice now appears; this could be a reference to a lack of justice. An image of Rolf Harris, who was found guilty of molesting children, appears halfway through the video. The identical image of Tsutomu Miyazaki appears at the game's conclusion, but his eyes have been written in black, and Led Zeppelin's "Stairway to Heaven" is played backward (like from the end of Part 1). In Part 5, an image of Andres Escobar, a Colombian footballer who was murdered after shooting at his own goal. From there, it is followed by the image of Roman Polanski, who was arrested for the rape of then-13-year-old Samantha Geimer. The video ends with the player stranded in the hallway at this point. The title screen shown in the "true" version. In the "true" version, the player was immediately taken into a hallway of monochromatic corridors, and the images that were displayed were replaced with violent gore and child sexual abuse material. G1.jpg featured an image of a child struck by a truck. G2 and G3 are the images of headless corpses that are related to the case of serial killer Richard Cottingham (also known as the "Torso Killer"). G4 is the deformed corpse of a baby. G5 is the image of what appears to be a woman licking a baby's genitalia in a dark room. Other images included were non-graphic ones also used from the original. Some of these images will display right away from the options on the title screen; for instance, clicking any of those options will cause one of the headless corpses to appear on the screen for a few seconds. In the end, the player encounters a dead end, and a heavily slowed-down song plays, similar to how the original ends. There is an accessible "clone" version with graphic images removed. These are the remaining copies that are easily accessible, except for the one Jamie Farrel covered. Speculation Since the version from 4chan was made public, there has been speculation as to who created it. In 2017, a man from Lubbock, Texas, named Gary Graves was arrested on charges of child sexual abuse material. The man in question is assumed to be the one who was actually behind a Reddit account called ScarebereZK, as well as the YouTube channel with the same name that contains a now-deleted video called "Sad Sad Satan" that, at the end of the video, shows a person who is actually a lookalike of Gary Graves himself. However, it is still unknown whether the claim that Jamie linked "ZK" as the person from whom he downloaded has been confirmed yet.[3][4] Trivia On May 16, 2022, PlanscautZK published a new game called Stranger Than Real Sad Satan on itch.io, but whether this is the same game as Sad Satan (due to similarities) or just an entirely new game done in the Terror Engine is up for debate. Loading No more content. So sad. Have you created amazing artwork for this game? Upload it here and share your work with the community. The artwork you post must be your own creation. Do not post the work of other people. Instead, please encourage them to post it. Our world has no shortage of atrocities, and Sad Satan makes a point of highlighting that fact. The game includes images of JFK moments before his assassination, as well as audio clips of Charles Manson and Hitler, often distorted and reversed to sound more terrifying. Perhaps most unsettling aspect of the game is its frequent use of images of Jimmy Savile, who has been called "one of the most prolific sex offenders" of all time by the NSPCC (The National Society for the Prevention of Cruelty to Children). Sad Satan uses photos to illustrate the irony in this, as during his life, Savile was very well regarded by the NSPCC, and may have used his charitable reputation with the organization to gain access to some of his victims. Playing Led Zeppelin albums in reverse to seek out Satanic messages is arguably the precursor to modern-day creepy pasta. Allegedly, when you play a specific line from "Stairway to Heaven" in reverse, it sounds as if it says, "Oh here's to my sweet Satan. The one whose little path would make me sad, whose power is Satan. He'll give those with him 666, there was a little tool shed where he made us suffer, sad Satan." Does that last line sound familiar? It turns out Sad Satan has been around for much longer than most people might think, longer even than the deep web. While it's likely that the game was named in reference to the song's supposed Satanic undertones, it's terrifying to think the two may somehow be related.Sad Satan is equal parts mystery and horror. People have spent hours poring over every picture, sound file, and garbled character that appears in the game, searching for possible meanings. While much of the game's contents remain a mystery, the encrypted messages that begin appearing around part three of the video series that first popularized the game were revealed to be written using a substitution cipher. One Reddit user figured out that, when decrypted, they spell out threatening promises like "I can track you," and "Kill kill and kill again." Considering the game originates on the deep web and comes with lord knows what kinds of malware bundled in, that threat may not be as empty as one would hope.While the version that appeared on Obscure Horror Corner's channel may be the beginning of Sad Satan's public life, the footage shared may not have come from the original game. Not long after OHC posted a deep web TOR link to the game that many believed to be fake, an anonymous poster on 4chan's /x/ board came forward claiming to be the discoverer of the game. The user claimed that OHC had not posted the real Sad Satan, but rather an edited copy lacking many of the darker aspects of the original. Allegedly, the original Sad Satan included sexually explicit images of children and gore, as well as damaging malware that would destroy the player's computer. This prompted those in the Sad Satan subreddit to create a malware-free version of the game wherein the gruesome pictures were replaced with more innocuous imagery; this user-friendly version is dubbed clean.exe. While it's certainly a more censored experience than any of the alleged original copies of the game, it remains the only version that can be played safely, legally, and ethically.As is the case with many deep web legends, the original Sad Satan is almost impossible to track down. The version of the game posted to Obscure Horror Corner has never been played by anyone else, and the owner of the spooky YouTube channel claims that this is because the original game came packaged with illicit materials — like gore and sexually explicit images of children — that they didn't want to share with the world. This has led to people releasing fake versions that may be dangerous to their players, and has spawned all sorts of rumors about where the game came from to begin with, or if it ever existed at all.Allegedly, the original file containing Sad Satan (that was posted to a deep web forum) came bundled with dangerous, illicit material like malware and sexually explicit images of children. When Obscure Horror Corner was asked why their link to the game didn't work, they stated that it was originally bundled with pictures of gore and child abuse, which they didn't want to help distribute. OHC also claimed that their computer began behaving oddly after they played the game. Their story matches up with various Redditors claims, as many of the game's first players noticed their computers shut off, became sluggish, or sometime even refused to boot up after playing the game. The clear existence of in-game malware — combined with garbled threats to track players — really increases the sense of risk associated with the game.
