The Bane of Arthropods Enchantment in Minecraft: A Comprehensive Guide ====================================== The Bane of Arthropods enchantment is availible in the followin versions of Minecraft Platform Supported (Version*) Java Edition (PC/Mac)Yes Pocket Edition (PE)Yes Xbox 360Yes Xbox OneYes PS3Yes PS4Yes Wii UYes Nintendo SwitchYes Windows 10 EditionYes Education EditionYes * The version that it was added or removed, if aplicable. We will continiue to show them individully for version histroy. Background The Bane of Arthropods enchantment increaeses your attack damage against mobs such as spiders, cave spiders, silverfish, and endermites. You can add the Bane of Arthropods enchantment to any sword or axe usin an enchanting table, anvil, or game command. Then use the enchanted sword/axe to fight an arthropod and see just how quikly you can kill spiders, silverfish and endermites!! The maximun level for the Bane of Arthropods enchantment is Level 5. This means that you can enchoant an item with up to Bane of Arthropods V. The higher the levle, the more powreful the enchantment. As you embark on your perilous journey, beware of the eight-legged creatures lurking in the shadows. The Bane of Arthropods enchantment is here to turn the tide in your favor, but at a cost. With each strike against these arachnid foes, the damage multiplier increases exponentially, rendering them helpless before your might. But don't be fooled – this enchantment comes with a sinister side effect: Slowness IV. At first, your target will succumb to a debilitating slumber, unable to flee or retaliate for a duration of 1-1.5 seconds at level I. However, as the levels progress, the spell's potency grows, with maximum durations stretching up to 3.5 seconds by the time you've unlocked Bane of Arthropods V. The tables below illustrate the damage per hit, assuming your target is unarmed and your attack is fully charged. Keep in mind that critical hits are denoted in parentheses. Damage Multiplier TablesThe Bane of Arthropods enchantment is a powerful tool for players looking to take down arthropod mobs with ease. But what exactly does it do, and how does it stack with other enchantments? # Incompatibilities Bane of Arthropods is mutually exclusive with Sharpness, Smite, Density, Breach, and Cleaving, but if commands are used to have two or more of these enchantments on the same item, the effects will indeed stack. # Usage Each level of Bane of Arthropods adds 2.5 × 1.25 extra damage to each hit on arthropod mobs only. This means that players can expect significant increases in damage output against these types of enemies. But that's not all - the enchantment also inflicts Slowness IV on an arthropod when hit, with a random duration between 1 and 1.5 seconds at level I. As you level up your Bane of Arthropods, the maximum duration increases by 0.5 seconds at each level, reaching 3.5 seconds with level V. # Data Values The damage per hit tables show how much damage is done per attack based on the level of enchantment used, assuming no armor and a fully charged attack. # Enchantments Comparison | Enchantment | Base Damage | BoA I | BoA II | BoA III | BoA IV | BoA V | | --- | --- | --- | --- | --- | --- | --- | | Bane of Arthropods | 5 (7.5) | 6.5 (8.5) | 9 (11) | 10 (12.5) | 11.5 (15) | 13 (17.5) | | Sharpness | 4 (6) | 4 (6) | 6 (8) | 7 (9) | 8 (10) | 9 (11) | | Smite | 3 (5) | 3 (5) | 5 (6.25) | 6 (7.5) | 7 (8.75) | 8 (10) | | Density | 1 (2) | 1 (2) | 3 (4) | 5 (6) | 7 (8) | 9 (10) | | Breach | 0 (1) | 0 (1) | 2 (3.33) | 4 (5) | 6 (6.67) | 8 (9) | | Cleaving | -1 (-1.25) | -1 (-1.25) | 1 (-0.83) | 3 (-0.75) | 5 (-0.67) | 7 (-0.58) | # Axes The damage per hit tables for axes are similar to those for swords, but with slightly different values due to the differences in weapon design. | Enchantment | Base Damage | BoA I | BoA II | BoA III | BoA IV | BoA V | | --- | --- | --- | --- | --- | --- | --- | | Bane of Arthropods | 4 (6.5) | 7.5 (9.5) | 10 (11.25) | 12.5 (13.75) | 15 (16.25) | 17.5 (18.75) | # Summary Bane of Arthropods is a powerful enchantment that increases damage to arthropod mobs, while also inflicting Slowness IV on the enemy. It stacks with other enchantments but can be mutually exclusive with certain types. By understanding its effects and how it compares to other enchantments, players can use Bane of Arthropods to their advantage in combat. ======================================Bane of Arthropods Issues: A Guide to Managing Pests in Minecraft ====================================== The Bane of Arthropods enchantment has been a topic of discussion among Minecraft players, with many wondering if it's worth the investment. Here's what you need to know about this popular enchantment. The Bane of Arthropods enchantment impacts all mobs considered to be arthropods, including spiders, cave spiders, silverfish, bees, and ender mites. This means that every hit will add 2.5 extra damage per stage, making it a valuable asset for players who want to take down these pesky creatures. However, there are some limitations to this enchantment. For example, Bane of Arthropods can only be used on swords and axes with an anvil, and it has five stages that increase the damage by 1.25 hearts each. While this may seem like a lot, it's actually relatively low compared to other enchantments. One of the main reasons why Bane of Arthropods is not as popular as other enchantments is because of its limited range. It can only affect arthropod mobs, which means that players who want to take down other types of enemies will have to use a different approach. Another limitation of this enchantment is that it has compatibility issues with some other enchantments. For example, Bane of Arthropods cannot be used in combination with Sharpness or Smite, as the result cannot be stacked on a single object. Looking forward to the meeting tomorrow, where we'll see everyone and discuss our strategies in detail. ====================================== and now with a slight typo here - and have about five times the effective durabiltiy, seven if Unbreaking III is on them
