PeopleSoft Accelerators

Whether your organization is on a prior version of PeopleSoft and looking to upgrade, or on 9.2 but unable to apply PUM Images or maximize new features easily, Elire has the tools to help unlock the potential of your PeopleSoft Application.

Harnessing the power of PeopleSoft means:

- Making sense of the potentially vast number of PeopleSoft Enhancements (Bolt-Ons and Customizations) your organization has and where they reside.

- Tracking upgrade or optimization initiatives carefully to address current high priority business needs while also preparing your organization for the future (whether in PeopleSoft or a cloud application).

Elire's toolkit of PeopleSoft Accelerators are built on a current PeopleTools framework giving your organization the visibility into your PeopleSoft application to make strategic decisions and set project scope with confidence.

Elire's Customization Identification Tool

Elevate beyond the Compare Report and leverage the Elire Customization Identification Tool™!

Elire's proprietary Customization Identification Tool™ analyzes and groups existing enhancements into "customization buckets" organized by Component (Business Process) to allow for easier review and analysis.

- A much cleaner and comprehensive view of all online customizations at the modular and business process levels

- A more efficient method for analyzing online customized objects by minimizing efforts spent analyzing and grouping compare reports or researching previously migrated projects

- Easy identification of offline customized objects not captured by the online BI Publisher Reports generated by the Customization Identification Tool™

  - "Offline" objects typically represent customizations or bolt-on's to the following object types: Application Engine, Application Packages, Integration Broker, Component Interfaces, Security, Queries, etc.
  - File based customizations such those found in

SQRs and Cobols are also addressed through various means of file-based compare processes

- Simplified assignment of broad "categories of effort" to the various customizations to understand their level of complexity

- A critical, high-level understanding of the effort necessary to reapply a customization and an understanding of how invasive the customization is

- Identification of customizations that have become obsolete and/or can be dropped to satisfy key project and organizational objectives

- A foundation for analyzing which customizations can be replaced by delivered features

Elire's Scope Object Tracker

Elire's Scope Object TrackerTM tool supports the gathering of key data elements on all potential Scope Objects, which allows project scope to be set thoughtfully and with confidence for your PeopleSoft upgrade and optimization initiatives.

- Elire's Scope Object Tracker™ tool supports the gathering of key data elements on all potential Scope Objects, which allows project scope to be set thoughtfully and with confidence for your PeopleSoft upgrade and optimization initiatives.

- Supports various project efforts including: PeopleSoft Upgrades, PeopleSoft PUM Updates, and PeopleSoft Optimizations to support the standardization of business processes

- Facilitates tracking "In-Scope" items throughout the project lifecycle: from Fit/Gap, to Design, to Build, and Functional Unit Testing

- Manages real-time project resource capacity vs. assigned scope of work

- Facilitates the impacts for a possible future migration to Oracle Cloud applications, including the following key data elements:

  - Is the customization requirement addressed in the cloud?
  - If a business requirement is not met by the target cloud application, how will it be addressed: PaaS, Flexfield, Reporting, etc.)
  - High-level cost-benefit & recommendation for addressing the customization given future cloud application considerations

Why Elire?

- **18+ Year PeopleSoft Partner** – And active member of the Oracle Partner Network, Quest Oracle Community, and Regional User Groups

- **Foundation in PeopleSoft** – Most of the Elire Partners and consultants worked for PeopleSoft, with consultants averaging 20+ years of experience

- **100+ - PeopleSoft Clients** – including Federal, Public Sector, Healthcare, Education, and Financial Services

- **Application Roadmapping Experts** – to help Clients make thoughtful decisions about the future of their IT Investments with confidence

- **275+ - PeopleSoft Projects** – including PeopleSoft Implementations, Optimizations, Managed Services, and 20+ 9.2 Upgrades
