

Agentic Exposure Management

The Operating Layer for Continuous Risk Reduction

Prioritize smarter. Remediate faster.

Stop managing vulnerabilities. Start reducing risk.

Tonic's AI-native Exposure Management platform turns fragmented security and IT signals into clear, **business-aligned** risk decisions and **orchestrates remediation to completion**.

Instead of static scoring, dashboards and ticket factories, Tonic operates as a **decision and execution engine** that continuously prioritizes what matters most and ensures real exposure reduction, with humans firmly in control.

Benefits

Reduce Risk, Respond Faster

Continuously focus on what matters and drive remediation to completion

Reclaim Expert Time

Agents handle investigation and coordination while teams focus on judgment

Turn Decisions into Action

Eliminate friction across security, IT, and the business with clear ownership

Get Clarity and Control

Replace generic scores with a business-led view leaders can act on

Why Vulnerability Management is Broken

Breaches happen because vulnerabilities were mismanaged - misprioritized or remediated too late

Industry studies consistently rank vulnerability exploitation among the top causes of breaches.

Most security breaches don't happen because vulnerabilities were not detected.

End-to-End Agentic Exposure Management Platform

Tonic replaces legacy vulnerability management with four continuous, agent-driven capabilities

Collect

Tonic Data Engineer

Agentic ingestion & sense-making

Connect any source and reconcile structured and unstructured data across cloud, on-prem, SaaS, and internal knowledge systems.

From brittle, manual integrations to a self-maintaining security data fabric

Contextualize

Tonic Navigator

Agents that understand the business & the attackers

Infer business, organizational, operational, temporal, and adversarial context automatically, without manual tagging.

From static enrichment to continuous, multi-dimensional reasoning

Prioritize

Tonic Exposure Analyst

Transparent, adaptive risk decisions

Continuously re-rank exposures based on business impact, exploitability, reachability, and resilience, with full explainability.

From generic, technical scoring to always-on, contextual risk decision

Act

Tonic Mobilization Coordinator

Autonomous remediation orchestration & validation

Turn decisions into action by routing work to the right owners, tracking remediation, managing exceptions, and validating outcomes.

From recommendations & Tickets to verified outcomes & follow-through

Measurable Risk Reduction + Cost Optimization

Faster remediation of business-critical exposures.
Scalable security operations without added headcount

>90%

Reduction in exposures requiring remediation

→ From noise to focus

50%

Faster remediation of business-critical risk (MTTR)

→ From exposure to risk reduction

35%

Security team capacity reclaimed, \$150k saved per year

→ From manual to scalable operations

Eliminate Exposures with Six Degrees of Context™

Business context

Determine how critical the asset is, the business processes it supports, and the potential impact if compromised.

Organizational Context

Identify which department, team and individuals “own” the asset and are responsible for fixing issues on it.

Geographical Context

Pinpoint where the asset is located and how specific physical and local circumstances affect its security.

Operational Context

Ascertain the function of the asset in daily operations, how resilient is it, and what are its interdependencies with other entities.

Temporal Context

Know the lifecycle stage of the asset, and its history of vulnerabilities, incidents and configuration changes.

Adversarial Context

Assess the likelihood that a threat actor will be able to reach the asset and cause harm.

“Tonic is a game-changer. It used to take days to identify an exposed asset and understand the potential risk to the business if exploited. With Tonic it takes minutes.”

About Tonic Security

Tonic Security delivers an end-to-end agentic decision and execution platform for exposure management. Its AI-native solution continuously transforms fragmented security and IT signals into business-aligned risk decisions and verified remediation outcomes. By combining a self-maintaining security Data Fabric with governable agentic workflows, Tonic enables organizations to move from vulnerability management to continuous risk reduction at scale. Leading enterprises rely on Tonic to cut remediation time, eliminate noise, and measurably reduce exposure across their attack surface.
