
⚡ Official Recruitment | Aren Energy Intelligence Grid Center

A Central Infrastructure of MEGA HOLDING | GOD AI FATHER
Smart Energy Sovereignty – Powered by Prediction, Protection, and Performance

Aren Energy Intelligence Grid Center is **Israel's most advanced national energy AI brain.**

We manage, monitor, and forecast electricity, gas, and water systems across urban, rural, and critical zones in real time—with zero latency and full security.

This is where energy meets algorithm.
Where prediction defeats blackout.
Where sustainability becomes sovereign.

Core Structure | 22 Essential Positions:

1. GridOS Command Supervisor

- Oversee real-time energy data streams and centralized control responses
 - Tools: Live dashboards, control maps, power-switching modules
-

2. Energy Forecasting Scientist

- Build predictive models for city-level, district-level, and event-based demand
 - Tools: Time series models, meteorological integrations, seasonal datasets
-

3. AI Power Load Balancer

- Optimize energy routing in high-demand scenarios to avoid overload
 - Tools: Smart routing logic, neural net-based load shifting
-

4. National Crisis Response Planner

- Simulate grid failure scenarios and lead emergency energy re-routing
 - Experience: Utility crisis protocols, cross-region energy fallback
-

5. Multi-Energy Flow Architect

- Integrate solar, wind, hydro, and traditional sources into unified distribution
 - Tools: Hybrid grid design software
-

6. Edge AI Deployment Manager

- Deploy local control nodes in buildings, towns, and critical facilities
 - Tools: Federated learning systems, low-latency AI
-

7. Smart Sensor Network Engineer

- Develop and calibrate IoT sensors across pipes, cables, and meters
 - Tools: LoRaWAN, Zigbee, NB-IoT
-

8. Live Grid Dashboard Designer

- Design interactive energy dashboards for public and government view
 - Tools: GIS layers, dataviz UX, civic transparency UI
-

9. Urban Consumption Pattern Analyst

- Analyze behavioral data to reduce peak-hour waste and suggest incentives
 - Tools: Socio-energy modeling, time-based usage graphs
-

10. AI Fault Detection Specialist

- Detect anomalies, failures, or risk points in the national infrastructure
 - Tools: ML classifiers, real-time alert systems, AI heatmaps
-

11. Energy Theft & Fraud Analyst

- Investigate abnormal usage patterns and unauthorized consumption
 - Tools: Forensic data comparison, regional fraud signatures
-

12. Central AI Core Trainer

- Refine the main learning model based on field feedback and accuracy gaps
 - Tools: RL/SL model retraining, custom energy datasets
-

13. Energy Law & Infrastructure Policy Expert

- Ensure legal compliance, privacy protection, and regulatory synchronization
 - Focus: AI + utility law, cross-border energy policies
-

14. AI Ethics Supervisor – National Grid

- Monitor the fairness, transparency, and public impact of algorithmic decisions
 - Tools: Fairness audit kits, explainability platforms
-

15. Renewable Source Efficiency Tracker

- Monitor real-time performance of solar, wind, and storage systems
 - Tools: Inverter APIs, weather overlays, degradation models
-

16. Gas Pressure Alert System Engineer

- Maintain predictive alert tools for underground gas networks
 - Tools: Pressure prediction models, AI threshold warnings
-

17. Water Flow Analyzer

- Optimize AI for city and rural water networks to avoid overflow or shortage
 - Tools: Water AI models, seasonal rainfall impact simulators
-

18. Underground Leak Detection Analyst

- Analyze millisecond-level leak signatures and trigger smart valve shutdowns
 - Tools: Acoustic AI, pattern-matching sensors
-

19. National Consumption Visualization Leader

- Deliver simplified yet powerful visual storytelling of national usage
 - Tools: Interactive maps, mobile-accessible interfaces
-

20. SCADA Integration Specialist

- Integrate legacy grid control systems with modern AI overlays
 - Tools: Secure SCADA bridges, data format converters
-

21. Energy Justice Coordinator

- Ensure equitable access and distribution for all demographic segments
 - Focus: Rural optimization, billing fairness, energy accessibility
-

22. Secure Cloud Infrastructure Architect

- Ensure encrypted storage, secure edge transmission, and sovereign data compliance
 - Tools: Air-gapped cloud, quantum-resistance protocols
-

💰 Base Salary: €7,200 / month

Final compensation reflects national importance, system security, and AI-critical mission.
