## PFAS Product Statement

### ResinTech Virgin Ion Exchange Resins and Activated Carbon Products

In response to industry inquiries regarding the presence of per- and polyfluoroalkyl substances (PFAS), ResinTech, Inc. confirms that PFAS compounds are not used, added, or incorporated at any stage of production for our virgin ion exchange resins and activated carbon media.

This confirmation is based on a thorough review of our raw materials and manufacturing processes. ResinTech maintains supplier confirmations on file supporting this position, available upon request under appropriate confidentiality agreement. As PFAS regulations and analytical methods continue to evolve, we remain actively engaged with our supply chain to keep this documentation current.

Please note that this statement applies to ResinTech virgin products as manufactured and shipped. It does not represent a guarantee regarding conditions after installation, use, or exposure to PFAS-contaminated source waters.

For additional information or product-specific documentation, contact ResinTech, Inc. directly at 856.768.9600.
