Make AI Work for You

PROMPT PACK / VIDEO CREATION / OCTOBER 2026

Done-for-You Prompts Pack for Video Creation

Reusable prompts for ideas, scripts, visuals, and a more reliable production workflow.

Copy these prompts into your preferred AI assistant and replace the bracketed details. The prompts are designed to help you think and draft; check current facts, rights, and platform requirements before publishing.

01 / Find useful video ideas

Give the assistant a clear audience, channel promise, and available evidence. Avoid asking it to guess what is trending without current data.

> *Suggest 10 video ideas for a [CHANNEL TOPIC] YouTube channel serving [AUDIENCE]. The channel helps viewers [PROMISE]. Use these current audience questions or analytics notes as evidence: [PASTE INPUTS]. For each idea, provide a viewer problem, a clear promise, and a possible title. Mark any idea that depends on facts I should verify.*

> *I want to teach [TOPIC] to beginners. Propose 5 searchable video ideas and 5 curiosity-led ideas. Keep every title accurate and explain what the viewer should be able to do or understand after watching.*

> *Review these proposed ideas: [PASTE LIST]. Identify overlap, weak promises, missing audience needs, and ideas that may age quickly. Recommend the strongest three and explain why.*

02 / Draft a script that is easy to produce

Ask for a production-ready structure, then rewrite it in your own voice and verify every claim.

> *Create a [DURATION] YouTube script about [TOPIC] for [AUDIENCE]. The viewer should leave able to [OUTCOME]. Include a concise opening, clear sections, voiceover, suggested visuals, on-screen text, and approximate timestamps. Use this tone: [TONE]. Do not invent statistics or sources. Flag any claim that needs verification.*

> *Turn this approved outline into a script for [EDITOR OR WORKFLOW]: [OUTLINE]. Keep the spoken language natural. Separate narration, visuals, and on-screen text. Suggest only visuals I can realistically create or license.*

> *Edit this draft for clarity, pacing, and spoken delivery: [SCRIPT]. Preserve the meaning and voice. Identify repeated ideas, unsupported claims, and places where the visual should carry information instead of the narration.*

03 / Generate consistent visual directions

Midjourney and other image tools change frequently. The examples below avoid a hard-coded model version. Use the service's current default unless you have a specific reason to choose another.

> *Clean minimalist home office, natural window light, modern desk setup, calm productivity atmosphere, editorial photography, ample negative space for a title --ar 16:9*

> *Digital calendar with time blocks and a clear to-do list, organized desktop scene, soft neutral palette with cyan accent, realistic interface-inspired composition without readable brand names --ar 16:9*

> *Smartphone in focus mode on a quiet desk, notifications softened in the background, cinematic natural lighting, uncluttered composition --ar 16:9*

> *Sequence of sticky notes being completed beside a simple task list, satisfying sense of progress, warm realistic photography --ar 16:9*

> Before publishing an AI-generated image, review it for distorted text, misleading details, unwanted logos, likeness concerns, and the current rights and disclosure requirements of the platform and tool.

04 / Build a repeatable workflow

1. Start with a real audience question or problem.
2. Draft several angles, then choose one clear promise.
3. Create and fact-check the outline before writing the full script.
4. Draft the script, then rewrite it in the channel's voice.
5. Plan visuals that reinforce the message and can be created or licensed.
6. Edit for pacing, accessibility, accuracy, and mobile readability.
7. Review the final title and thumbnail together so both accurately represent the video.

> Current tool reference: Midjourney prompts support descriptive text followed by parameters. Version settings change, so consult the current documentation before adding a version parameter.
