ESS BASIK

SQUALANE
+ TOCOPHEROL

(NATUROL)⁰

What it is:

ESS BASIK is a minimalist two-component base designed to build clean, stable and highly compatible formulations. Its profile combines olive-derived squalane with natural γ/δ -tocopherols, delivering effective antioxidant protection that helps preserve the colour, odour and texture of the oil phase.

Why it works:

Squalane provides a light skin feel with high biocompatibility, enhancing spreadability and absorption without adding weight. Natural γ/δ -tocopherols reinforce oxidative stability and help maintain the integrity of sensitive oils and lipophilic actives.

How to use it:

It incorporates easily into O/W, W/O and anhydrous systems, and works as a base for serums, balms, sticks and minimalist oils.

Claims:

- Biocompatible emollient base built on olive-derived squalane.
- Oil-phase antioxidant support with Tocopherol for shelf stability.
- Helps resist oxidation and preserve sensorial consistency over time.
- Lightweight, fast-absorbing, non-greasy finish.
- Broad compatibility across O/W, W/O, and anhydrous systems.
- Low odor, clean and minimalist INCI.

Certifications:

ecovadis
