

GLOSSWOOD®

ARCHITECTURAL TIMBER

MALLEE CLADDING

GW x ABODO

Mallee celebrates timber in its most natural and expressive form, combining the high-performance properties of GW x Abodo Cladding with a more relaxed, character-rich visual grade. Crafted from heat-tempered, fast-renewable New Zealand Radiata Pine, Mallee offers enhanced stability, durability and coating performance for long-term exterior use.

Approximately 50% clear grade timber is combined with boards featuring natural characteristics such as knots, resin pockets, flowing grain and tonal variation. These features create depth, movement and an organic rhythm across the facade, making natural variation an integral part of the design.

Mallee provides a cost-effective alternative to premium clear-grade cladding, bringing the architectural benefits of Vulcan to projects where premium clear lengths are not always required.
