Unpaid Internship: Cyber Data Hunter 🕵️‍♀️💻

We're on the lookout for a curious, resourceful mind to join our crew for a short-term internship. This is your chance to get hands-on with a real-world cybersecurity data project, where research meets problem-solving, all while working alongside a small, fun, and boldly unconventional team.

You might be our kind of human if you…

- Enjoy digging through data and spotting patterns others miss.
- Can wrangle Python, spreadsheets, or any other tools that make data behave (bonus points, but not required).
- Have a genuine interest in cybersecurity, gaming, or tech culture.
- Are reliable, organised, and not afraid to ask "what if we tried…?"

The gig

- 3–4 weeks (flexible start date)
- Fully remote: work from anywhere with WiFi and caffeine
- Full-time is ideal, but we'll consider part-time if you bring the right energy

What's in it for you

- Real project experience you can actually put on your CV/portfolio
- Insight into the cybersecurity industry (the kind you won't get from a textbook)
- A chance to collaborate on something innovative from the ground up
- A genuinely fun and supportive team that values ideas from everyone, not just the "experts"

This is an unpaid internship, designed for skills building, industry exposure, and networking.

Note: This job spec is open to changes based on the successful candidate's suggestions for better execution. However, the overall goals and expected outcomes will remain the same.

To apply for this internship role, please email the address below and tell us why you'd be a great fit.

Good luck and we hope to see you soon!

Kind regards,
