The product: Dust, cigarette smoke, pollen and pet dander: With so many irritants in the air, clean air is a hot commodity. Americans spend hundreds of millions of dollars on furnace filters and air cleaners each year. ===== Though some consumers are just looking to bring some freshness into their lives, many others hope that their investment will help relieve their asthma or allergies. If you've ever shopped for an air cleaner -- or if you've ever looked through a SkyMall catalog -- you've seen ads for ionic air purifiers, devices that take an unusual approach to clearing the air. Instead of using fans to move air through filters, these machines release negatively charged ions that electrify dust, dander, and other particles. ===== The airborne particles pick up the negative charge and become strongly attracted to positively charged collection plates inside the machine. (In many cases, they also stick to other charged surfaces such as walls, table tops, and TV screens.) Most ionic air purifiers work silently and don't have any motors or moving parts, which is a plus for some consumers. ===== However, there's another issue with these devices: They release ozone, a potential pollutant. A study by researchers at UC Davis found that one popular brand, the Ionic Breeze Quadra, released about 2.2 milligrams of ozone per hour. (Ionic purifiers shouldn't be confused with ozone generators that are marketed as "air cleaners.") ===== Ionic air purifiers are sold at drugstores, department stores, and online. The well-known Ionic Breeze line is a popular product of the Sharper Image store. One current offering, the Ionic Breeze GP, comes with a UV light to kill airborne germs. ===== According to the Sharper Image website, the Ionic Breeze is "proven effective at reducing airborne allergens and irritants -- with no fan, no motor and no noise." However, Dr. James Sublett, a clinical professor at the University of Louisville, says that ionic air purifiers don't really improve air quality. ===== According to Sublett, these devices can't effectively remove dust, dander, and other irritants from a room. Without fans, they can only collect particles from a few feet away. And when even small amounts of dust enter the device, the plates inside quickly lose their power. The Ionic Breeze GP SI730 air purifier is designed to improve indoor air quality by circulating and cleaning the air with its ionic technology. However, its effectiveness has been questioned due to the new standard for ozone emissions set by the US Environmental Protection Agency (EPA), which some argue is misleading. According to Jeffery Siegel, an assistant professor of civil, architectural and environmental engineering at the University of Texas at Austin, even products that release small amounts of ozone could easily reach hazardous concentrations in poorly ventilated spaces. He suggests that people with asthma or allergies consider installing high-efficiency particulate air (HEPA) filters in their heating or cooling systems to trap irritants. The Ionic Breeze GP SI730 user manual provides important safety information, including warnings about electrical shock, fire, and injury when using the appliance. It emphasizes the need for proper grounding, ventilation, and maintenance to avoid risks. To operate the unit safely, users should follow basic precautions such as connecting it to a grounded outlet only, using indoors only, unplugging from outlet when not in use, and avoiding wet hands when handling the plug or appliance. The manual also warns against staring at the U.V. lamp or placing the face directly against the front or rear grill during operation. The user manual addresses frequently asked questions about cleaning and maintenance of the Ionic Breeze GP SI730. It recommends cleaning the collection grid every two weeks or anytime the unit makes an audible sound or the CLEANING INDICATOR lights. The manual also provides instructions for thorough cleaning, including washing the grid with warm soapy water and allowing it to dry completely before returning it to the main housing. Overall, while the Ionic Breeze GP SI730 is designed to improve indoor air quality, its effectiveness and safety are subject to debate due to the new EPA standard and potential risks associated with ozone emissions. Users should carefully follow the user manual's instructions to ensure safe operation and maintenance of the unit. The Ionic Breeze device has several maintenance and cleaning instructions to ensure optimal performance and safety. ===== Additional Information can be obtained by consulting the user manual, which provides detailed guidelines for cleaning the exterior of the unit using a cloth or sponge and a solution of one part household bleach to five parts water. It is essential to allow the surface to dry completely before plugging it back into an outlet. The collection grid should not be removed or the germicidal lamp cover removed while the device is in operation, as this may cause malfunctions. The Ionic Breeze has been independently tested and found to comply with U.S. regulations. Germicidal Lamp Replacement Lamps are effective for approximately 12 months of continuous use. It is recommended to replace them earlier if there is no "blue glow" inside the housing when the unit is running in G.P. mode. Fingers can reduce the germicidal performance of the UV lamp, and it is essential to handle only by the metal area or use gloves. The model complies with FCC/DHHS regulations and has a V5 FULL THREE-YEAR WARRANTY, which covers defects in materials or workmanship, except for misuse or damage caused by failure to properly clean and maintain the product. The Ionic Breeze GP: A Revolutionary Air Purifier with Germicidal Protection ===== Setting up your Ionic Breeze is relatively simple; just place it at least twelve inches from the wall to avoid direct exposure to germicidal light, which can cause eye damage. Plug it into a grounded 110v outlet, and ensure children cannot stare directly into the unit. There are three main modes: ON, which cleanses air without activating the germicidal lamp; ON/G.P., which circulates air through UV light; Boost, which runs at maximum power for five minutes; and LoMed/HICLEANMODECONTROL, where the blue glow indicates the germicidal lamp is operational. The Professional Series TM Ionic Breeze Quadra(R) Silent Air Purifier, priced at \$399.95, boasts a unique design with removable front and rear grills for effortless cleaning. Standing 28" tall on a 9" diameter base, this tower-shaped air purifier weighs 10 1/2 pounds and is equipped with a 6-foot cord that plugs into a standard three-prong outlet. The unit operates at an energy-efficient 12 watts, offering three distinct air-cleaning speeds as well as a five-minute boost function. In addition to its impressive cleaning capabilities, the Professional Series Ionic Breeze Quadra(R) Silent Air Purifier also features an integrated UVC Sterilamp(R) that helps to eliminate airborne bacteria, mold spores, and viruses. This advanced technology is complemented by removable front and rear grills, power-safe control switches, and three air-cleaning speeds. The unit's energy demands reach up to 36 watts when operating at its highest settings. Both models are available in two stylish color options: light gray with silver onyx top or black with Buritech(TM) top. Furthermore, an exceptional five-year warranty is included with the purchase of either model. These high-quality air purifiers can be purchased exclusively through The Sharper Image catalog, their official website at www.sharperimage.com, and at more than 168 Sharper Image stores nationwide. Sharper Image is a renowned specialty retailer that has been providing innovative products to enhance daily life for many years. With over 168 retail locations across the United States, millions of award-winning catalogs mailed monthly, and extensive advertising through various media channels, The Company's products cater to a wide range of consumers. A notable aspect of Sharper Image is its proprietary products created by its in-house product development group, Sharper Image Design. These unique offerings are available for purchase both online and at physical stores, providing customers with numerous options to enhance their homes and lives.
