

Solving The Three Roadblocks of Registered Apprenticeships

Using technology to reduce administrative burden

1

Starting a RAP (Appendix A)

Getting started is the hardest and most intimidating part. AI can help ease this burden without sacrificing accuracy & control with assisted Appendix A creation.

Challenge

Launching a RAP requires generating and submitting a detailed Appendix A. This process is typically manual, disjointed, and confusing for new providers.

Solution

- ✓ Forms pre-populated based on program details.
- ✓ AI-assisted form fills for Appendix A sections.
- ✓ Editable output that can be submitted to USDOL directly.
- ✓ Step-by-step wizard to remove anxiety & complexity.

2

Enrolling Apprentices (Form 671)

Creating and submitting Form 671 to RAPIDS can involve gathering redundant information, chasing signatures, and ensuring compliance, all with limited technical support

Solution

- ✓ Secure & automated signature collection
- ✓ Form 671 generation pulling from Appendix A
- ✓ Future-ready for RAPIDS API

3

Reporting on RAPs

Tracking progress, competencies, and OJT often happens in siloed systems, spreadsheets, or paper logs, making compliance and oversight difficult.

Solution

- ✓ Real-time tracking of apprentice progress
- ✓ OJT log that's accessible to mentors & admins
- ✓ Streamlined reporting & data visualization

From the first form to year-three, this approach reduces friction, enhances access, and makes apprenticeship growth goals obtainable.
