RE: Radius Track Corporation Pre-curved, Light Steel (LSF) Framing Products Recycled Content

Radius Track Corporation is committed to supporting the design and construction industry in creating sustainable and environmentally responsible buildings. Our cold-formed steel (CFS) / light steel framing (LSF) products, uniquely among the most highly recycled materials used in construction, make a significant contribution to long-term sustainable development.

When it comes to the U.S. Green Building Council's (USGBC) LEED® categories for Material and Resources (MR) Credits, specifically LEED v4.1 and LEED v4 for Recycled Content, Radius Track Corporation's custom, pre-curved CFS/LSF products are manufactured using steel coil that contains an industry-standard minimum of 25% recycled content. However, as we source materials from multiple vendors, the recycled content may vary, and a higher recycled content percentage may be achieved depending on the chosen supplier, giving you the flexibility to control your project's sustainability impact.

To optimize your project's sustainable impact, Radius Track Corporation can coordinate its material procurement with a preferred vendor to help you meet your specific goals for LEED credit points. To enhance our ability to deliver products that align with your sustainability objectives, please communicate any requirements regarding acceptable suppliers during the quoting process.

We recognize that leveraging CFS/LSF within a sustainability strategy can be complex, involving multiple variables to maximize credit points. To ensure the best results, we recommend close collaboration with your design team and the LEED Project Administrator.

When submitting this letter to comply with LEED® documentation requirements, it is essential to confirm that no substitutions are made and that Radius Track Corporation's products are utilized. Should you need further information or assistance, please do not hesitate to contact our Technical and Sales team at +1 (763) 759-8885.

Thank you for considering Radius Track Corporation as your partner in sustainable building practices.

Sincerely,
Radius Track Corporation
