

## September Updates

# Df-OS Feature

## Dynamic Remark Label at Hide Question Level

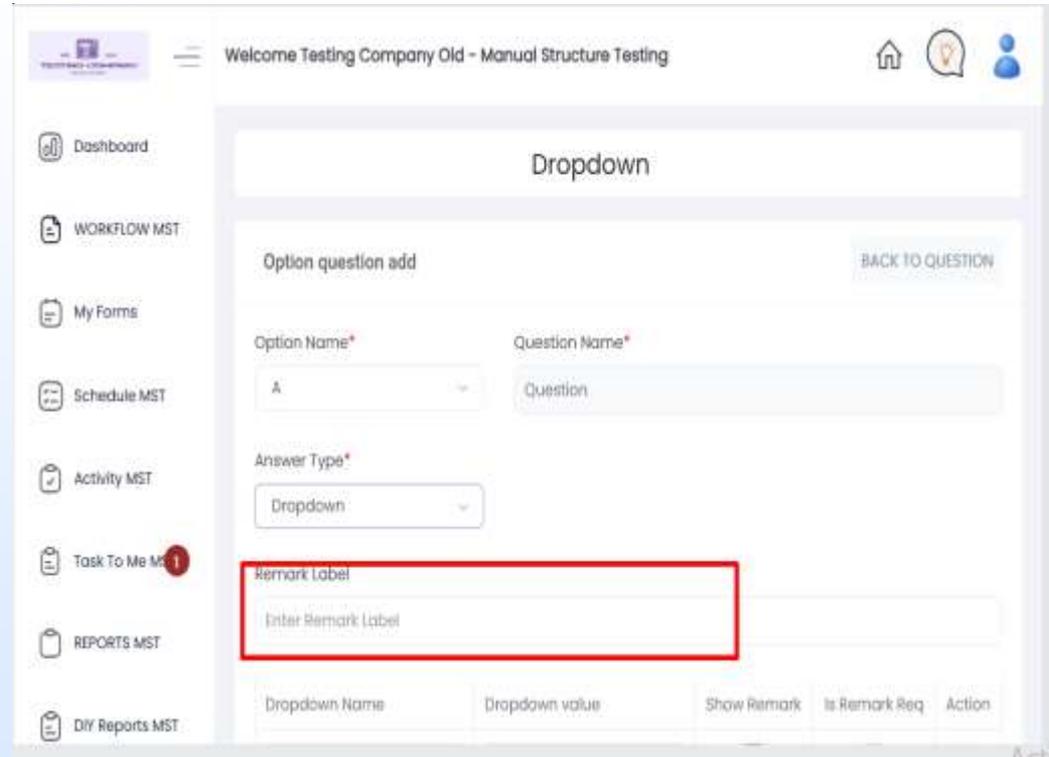

**Description:** Allow remark labels to be dynamic at the hide-question level, which can be reused as secondary answers across multiple use cases.

### Value Addition:

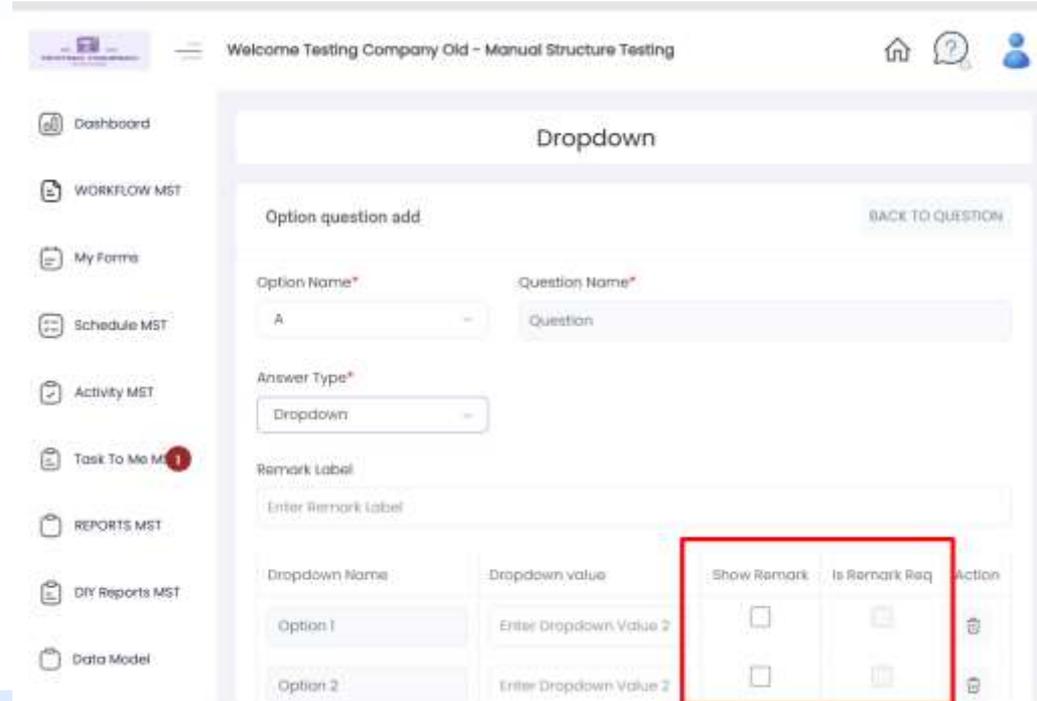

- **Creates flexibility by adapting remark labels for different contexts.**
- **Reduces the need for redundant configurations.**
- **Ensures remark handling remains scalable across multiple scenarios.**

### User Impact:

- **Users get context-aware remark options, simplifying their inputs.**
- **Saves time by avoiding repetitive remark entry setups.**
- **Improves adaptability for different industries and use cases.**

| Dropdown Name | Dropdown value | Show Remark | Is Remark Req | Action |
|---------------|----------------|-------------|---------------|--------|
|---------------|----------------|-------------|---------------|--------|

| Dropdown Name | Dropdown value         | Show Remark              | Is Remark Req            | Action |
|---------------|------------------------|--------------------------|--------------------------|--------|
| Option 1      | Enter Dropdown Value 2 | <input type="checkbox"/> | <input type="checkbox"/> |        |
| Option 2      | Enter Dropdown Value 2 | <input type="checkbox"/> | <input type="checkbox"/> |        |

## Mandatory/Non-Mandatory Remark Check (Level 1 & 2)

**Add checks at both Level 1 and Level 2 hide questions to configure remarks as mandatory or non-mandatory**

### Value Addition:

- **Offers fine-grained control over remark requirements**
- **Balances compliance needs with user convenience.**
- **Prevents incomplete records in critical workflows**

### User Impact:

- **Users are guided clearly on when remarks are required**
- **Avoids unnecessary burden in cases where remarks are optional.**
- **Enhances data completeness for regulatory or audit purposes.**

## Improvement: “No Record Found” Image in Task/Activity/My Forms

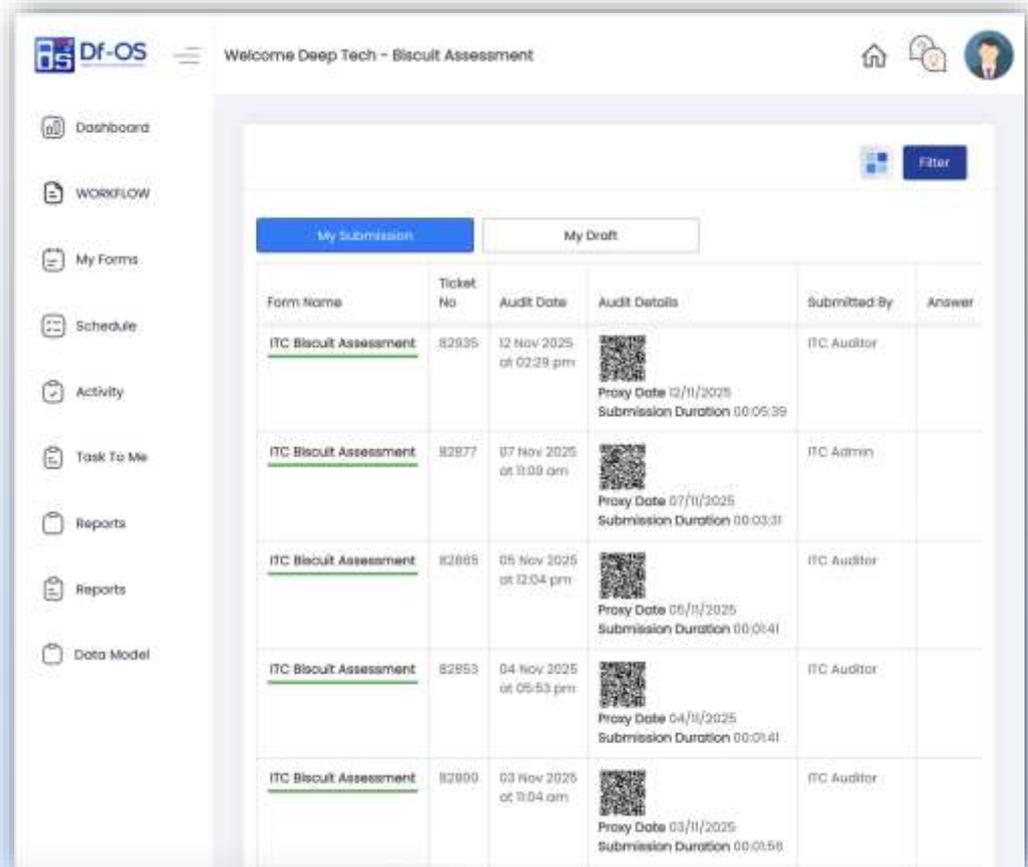

Display a ‘No Record Found’ image in Task to Me, Activity, and My Forms screens when no tabs are active or when no forms are assigned to the user

### Value Addition:

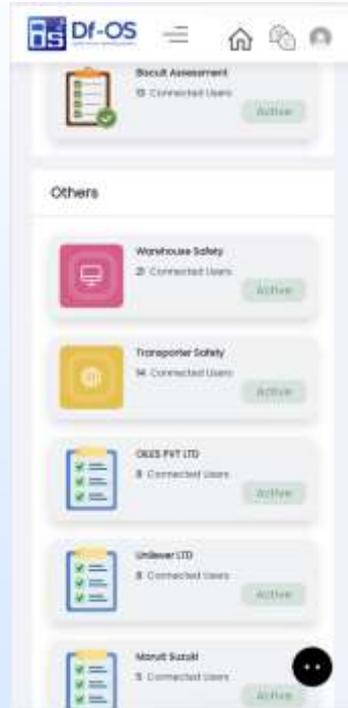

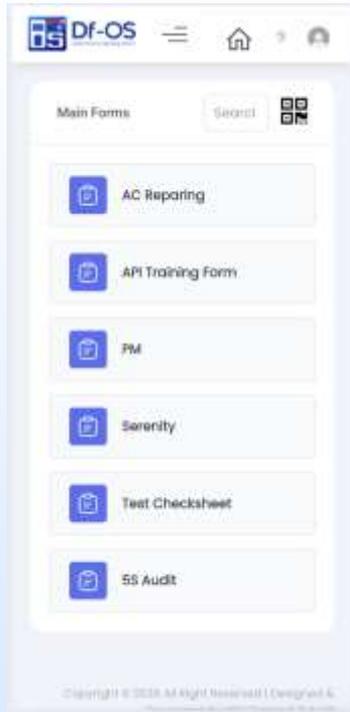

- Provides a clear empty state instead of blank screens.
- Enhances usability with visual feedback.
- Reduces user frustration by setting proper expectations

### User Impact:

- Users instantly understand there are no records to act on.
- Reduces confusion or the assumption of system errors.
- Creates a smoother, more professional product experience.

# Df-OS Feature

## Responsive UI for Mobile (Portrait Mode) – Header & Sidebar

Redesigned the header screen and sidebar to be fully responsive in mobile portrait mode for web browsers.

### Value Addition:

- Provides seamless usability across mobile devices.
- Ensures consistent navigation experience between desktop and mobile.
- Improves accessibility for users working on the go.

### User Impact:

- Users can easily access key features on mobile without layout issues
- Reduces friction for field teams using mobile devices.
- Increases overall satisfaction with a modern, responsive UI.

## DF-OS New UI – IoT Workflow Listing

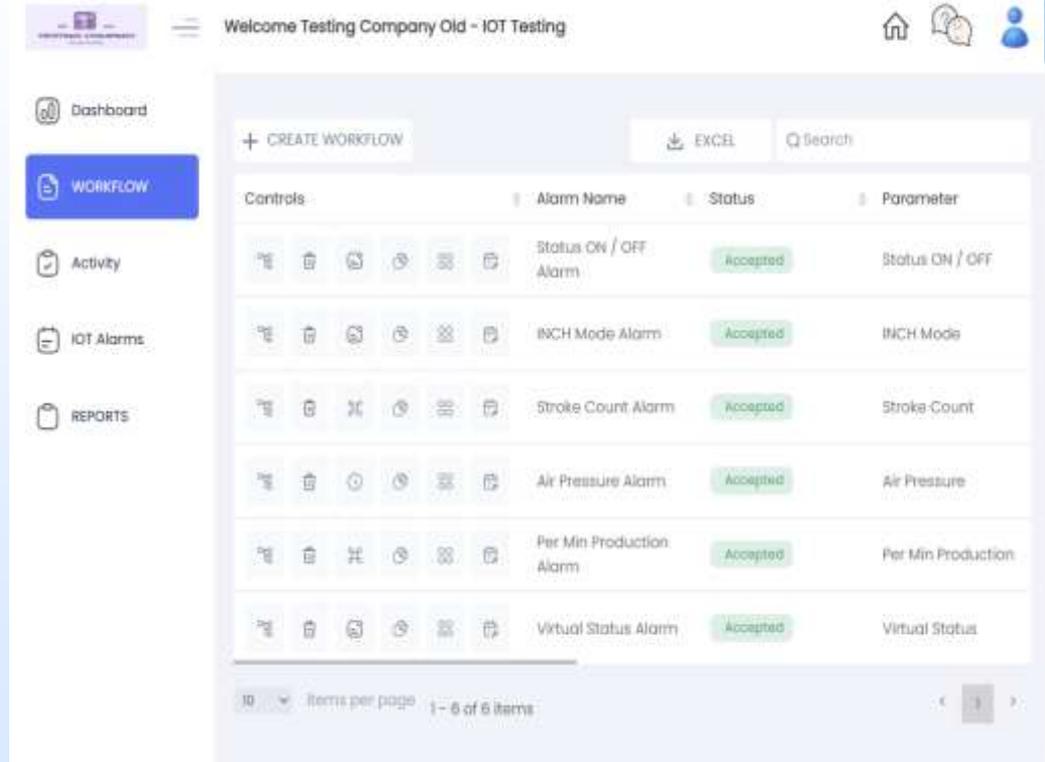

Released a new user-friendly and intuitive UI for IoT workflow listing screens.

### Value Addition:

- Improves the clarity and usability of workflow views
- Provides a consistent design language across IoT modules.
- Enables quicker understanding of workflow progress and states.

### User Impact:

- Users can track IoT workflows more effectively.
- Reduces time spent searching for key process details.
- Enhances overall usability of DF-OS IoT features
