Df-OS Feature

## Configurable Weekly & Monthly Audit Scheduling

Description: This feature enables admins to create audit schedules on a weekly or monthly basis by selecting specific dates within these intervals. Once a date is selected, the corresponding audit becomes visible to users only on the scheduled day in their schedule screen, ensuring clear and time-bound audit visibility.

.

Value Addition:

- **Structured and predictable audit planning**
- **Eliminates confusion with day-specific visibility**
- **Enhanced admin control over timelines**

User Impact:

- **Clean, organized schedule without unnecessary clutter**
- **Eliminates confusion with multiple contributors**
- **Increases clarity, accountability, and ensures timely completion**
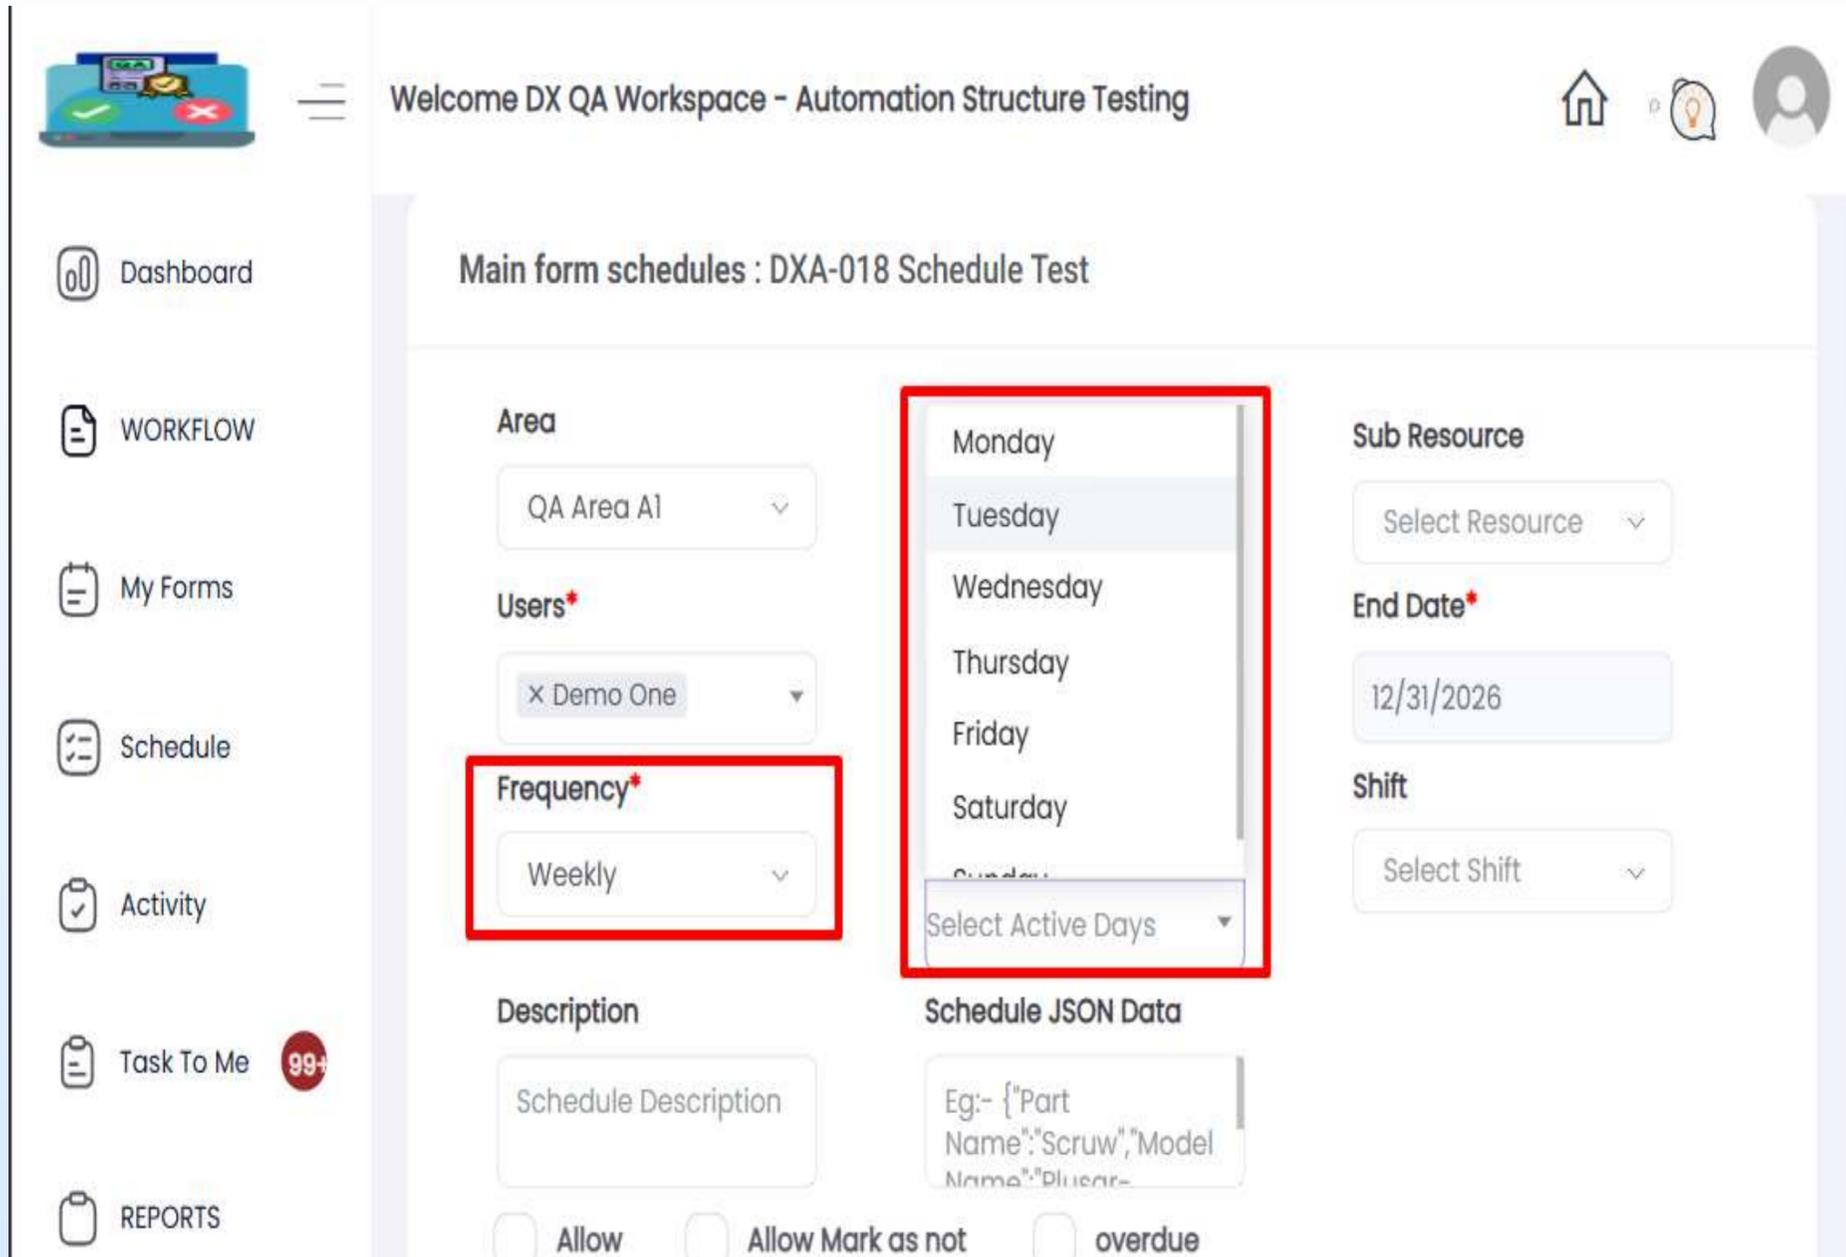

Df-OS Feature

## Tabular View in Activity & Task To Me Screen

This feature introduces a structured table view within the Activity & NC Audits tab, allowing users to view non-conformance audit details in a clean, organized, and grid-based layout. The table view will support easier sorting and filtering of audit records, improving navigation and data visibility for users handling large volumes of NC entries & audits.

Value Addition:

- **The tabular format provides a clear, organized view of all activities, making it easier to analyze and compare key information immediately.**

- **Optimized loading and sorting improve responsiveness, especially when handling large datasets.**

User Impact:

- **The modern tabular layout offers a clean and intuitive interface, making it easier for users to view and manage activities.**

Df-OS Feature

Enhanced Expiry Handling for Ticket Raising & Module Access

This feature introduces two key enhancements related to expired modules, ensuring clear communication and preventing user confusion when accessing expired functionality.

1. Auto Mailer Update for Ticket Raising: When a user raises a ticket for an expired module, the email content in the auto mailer will be updated
to clearly indicate that the module is expired. This ensures accurate communication and helps support teams understand the context of the
issue immediately.

2. Expiry Popup on Module Click: When a user clicks on an expired module, the system will display a popup message informing them that the
module has expired and needs to be activated. This prevents confusion and guides users toward reactivating the module before attempting
further actions.

Enhanced Expiry Handling for Ticket Raising & Module Access

Value Addition:

- Ensures clear and accurate communication by updating email content for expired module ticket requests.
- Reduces unnecessary back-and-forth between users and support teams.
- Prevents user confusion by notifying them instantly when accessing an expired module.

User Impact:

- Users receive immediate clarity when trying to access or raise tickets for expired modules.
- Reduces frustration by providing clear instructions through pop-up messages.
- Helps users take the correct action (reactivate module) without guessing the cause of the issue.
- Improves overall user experience by ensuring smoother navigation and communication.
