

Background

The Price Transparency rules - Hospital Price Transparency Rule (HPT) in 2021 and Transparency in Coverage Rule (TiC) in 2022 - have lifted the veil of secrecy on healthcare prices. The data released under these rules contain rich information on prices between insurers and healthcare providers for healthcare services, and allow employers, for the first time, to understand the variation in prices for commonly utilized healthcare services. **The data can guide employers today, but needs help to achieve its potential at lowering costs.**

Insurance Selection

Same Knee Replacement, Same Hospital, 2.9x the Price.

Hospital prices for commercial insurance in Kansas can vary by almost 300% for the same procedure, depending on the insurance plan, ranging from \$11,552 to \$33,856

Provider Selection

Choosing the Wrong Hospital can Cost \$1000s

Across Kansas hospitals within the same commercial insurer network, prices for the same inpatient knee replacement still vary widely. Navigating patients to lower-cost hospitals can cut spend without reducing benefits.

Issues with Price Transparency Data and How to Fix Them

Price Transparency holds the promise to bring down healthcare prices and reduce healthcare spending for employers and patients. However, the data being released under TiC has some flaws:

- **Incomplete data:** In Kansas, UnitedHealthcare and BCBS Kansas City only released prices for one hospital. BCBS Kansas only released data for nine hospitals.
- **No information on utilization:** HPT and TiC data files should be required to include information on service utilization. This can help identify high quality providers.
- **Inconsistent reporting structure:** Data released by different insurers can be in different formats which affects data usability. Requiring a uniform reporting structure can enhance the usability of price transparency datasets.
- **Difficult data formats:** Accessing the data requires an intermediary as the data structure is very difficult for even academic researchers to evaluate.

Fixing these issues and enforcing compliance by providers and insurers to release their data will significantly augment the impact of Price Transparency rules.
