

# Class 7 Integers Worksheet

Thinking Juggernaut

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Total Marks: 24

## Understanding Integers

### What are Integers?

Integers are whole numbers that can be positive, negative, or zero: {..., -3, -2, -1, 0, 1, 2, 3, ...}

### Key Rules for Integer Operations:

#### Addition:

- Same signs: Add and keep the sign →  $(+5) + (+3) = +8$ ,  $(-5) + (-3) = -8$
- Different signs: Subtract and take sign of larger →  $(+5) + (-3) = +2$ ,  $(-5) + (+3) = -2$

#### Subtraction:

- Change subtraction to addition of opposite →  $5 - 3 = 5 + (-3)$
- Then apply addition rules

#### Multiplication & Division:

- Same signs = Positive result →  $(+) \times (+) = (+)$ ,  $(-) \times (-) = (+)$
- Different signs = Negative result →  $(+) \times (-) = (-)$ ,  $(-) \times (+) = (-)$

## Sample Problem

**Problem:** A submarine is at 150 m below sea level. It descends 85 m more, then ascends 120 m. What is its final position relative to sea level?

**Solution:**

Step 1: Initial position =  $-150$  m (below sea level is negative)

Step 2: Descends  $85$  m more  $\rightarrow -150 + (-85) = -235$  m

Step 3: Ascends  $120$  m  $\rightarrow -235 + 120 = -115$  m

**Answer:** The submarine is at  $115$  m below sea level (or  $-115$  m)

## Part A: Basic Operations

★ Foundation Level

1. Calculate:  $(-15) + (+23)$

2. Subtract:  $18 - 25$

Rewrite as:  $18 + (-25) = ?$

3. Multiply:  $(-7) \times (+6)$

Remember: Different signs give negative result

4. Which integer is greater: -5 or -8?

Answer: \_\_\_\_\_

5. Divide:  $(-48) \div (-6)$

Remember: Same signs give positive result

6. Calculate:  $(-12) + (-8) + (+15)$

7. Find the additive inverse of -17

Additive inverse means: number + its inverse = 0

8. Arrange in ascending order: -3, 5, -7, 0, -1, 4

\_\_\_\_ < \_\_\_\_ < \_\_\_\_ < \_\_\_\_ < \_\_\_\_ < \_\_\_\_

## Part B: Multi-Step Problems

☆☆ Intermediate Level

9. Calculate:  $(-25) \times 4 + (-30) \div 5$

Solve multiplication and division first, then add

10. The temperature at 6 AM was  $-3^{\circ}\text{C}$ . It rose by  $8^{\circ}\text{C}$  by noon, then dropped by  $5^{\circ}\text{C}$  by 6 PM. What was the temperature at 6 PM?

At noon: \_\_\_\_ $^{\circ}\text{C}$

At 6 PM: \_\_\_\_ $^{\circ}\text{C}$

11. Simplify:  $[(-18) + 7] \times [(-5) + 8]$

Solve brackets first

12. A diver is at  $-45$  m. A bird is flying at  $+120$  m. What is the vertical distance between them?

Distance = |difference between positions|

13. Calculate:  $(-8) \times (-5) - (-4) \times 7$

THINKING

14. A man walks  $150$  m east (+), then  $80$  m west (-), then  $120$  m east (+). What is his final position from the starting point?

Final position: \_\_\_\_ m

15. If  $a \times b = -36$  and  $a = 9$ , find the value of  $b$

16. Calculate:  $|(-12) + 5| - |-8|$

Absolute value  $|x|$  means distance from zero (always positive)

17. A business had a profit of ₹15,000 in January, loss of ₹8,000 in February, and profit of ₹12,000 in March. What is the net result?

Use: Profit = positive, Loss = negative

Net result: ₹ \_\_\_\_\_

18. Simplify:  $(-6) + (-9) + (-4) - (-15)$

Change subtraction of negative to addition

## Part C: Advanced Applications

☆☆☆ Challenge Level

19. A lift starts at ground floor (0). It goes up 12 floors (+12), then down 5 floors (-5), then up 8 floors (+8), then down 15 floors (-15). At which floor is it now? Is it above or below ground level?

Show calculation:

Final floor: \_\_\_\_\_

Position: \_\_\_\_\_

20. The sum of two integers is -13. If one integer is 8, find the other integer. If their product is calculated, what will it be?

Other integer: \_\_\_\_

Product: \_\_\_\_

- 21.** In a quiz, +5 marks for correct answer, -2 marks for wrong answer, 0 for unattempted. Rahul attempted 20 questions: 12 correct, 5 wrong, 3 unattempted. What is his score?

Correct: 12  
 $12 \times (+5)$

Wrong: 5  
 $5 \times (-2)$

Unattempted: 3  
 $3 \times 0$

Marks from correct: \_\_\_\_

Marks deducted: \_\_\_\_

Total score: \_\_\_\_

- 22.** Calculate:  $[(-15) \times 4 + 20] \div [(-8) + 3]$

Solve each bracket separately first

- 23.** The table shows temperature changes in a city over 5 days. If the starting temperature on Monday morning was  $8^{\circ}\text{C}$ , find the temperature at the end of Friday.

Day	Change ( $^{\circ}\text{C}$ )
Monday	-3
Tuesday	+5
Wednesday	-2

Thursday	-4
Friday	+6

Show calculation:

Final temperature: \_\_\_\_ °C

**24.** A bank account has ₹5,000. The following transactions occur:

- Deposit: +₹3,500
- Withdrawal: -₹2,800
- Bank charges: -₹150
- Deposit: +₹4,200
- Withdrawal: -₹1,500

What is the final balance? If the bank charges ₹50 for each withdrawal, what would be the balance after including all charges?

Balance after transactions: ₹ \_\_\_\_

Total withdrawal charges: ₹ \_\_\_\_

Final balance with charges: ₹ \_\_\_\_

## Answer Key

### Part A: Basic Operations

1. +8 (different signs:  $23 - 15 = 8$ , take sign of larger)

2. -7 ( $18 + (-25) = -7$ )

3. -42 (different signs give negative:  $7 \times 6 = 42$ , result is -42)

4. -5 (on number line, -5 is to the right of -8, so -5 is greater)

5. +8 (same signs give positive:  $48 \div 6 = 8$ )

6. -5 ( $(-12) + (-8) = -20$ , then  $-20 + 15 = -5$ )

7. +17 (additive inverse of -17 is +17, because  $-17 + 17 = 0$ )

8.  $-7 < -3 < -1 < 0 < 4 < 5$

## Part B: Multi-Step Problems

9. -106 ( $(-25) \times 4 = -100$ ,  $(-30) \div 5 = -6$ , then  $-100 + (-6) = -106$ )

10. Noon:  $5^{\circ}\text{C}$  ( $-3 + 8 = 5$ ), 6 PM:  $0^{\circ}\text{C}$  ( $5 + (-5) = 0$ )

11. -33 ( $[(-18) + 7] \times [(-5) + 8] = [-11] \times [3] = -33$ )

12. 165 m ( $120 - (-45) = 120 + 45 = 165$  m)

13. 68 ( $(-8) \times (-5) = 40$ ,  $(-4) \times 7 = -28$ , then  $40 - (-28) = 40 + 28 = 68$ )

14. +190 m or 190 m East ( $150 + (-80) + 120 = 190$ )

15.  $b = -4$  ( $9 \times b = -36$ , so  $b = -36 \div 9 = -4$ )

16. -1 ( $|(-12) + 5| = |-7| = 7$ ,  $|-8| = 8$ , then  $7 - 8 = -1$ )

17. ₹19,000 profit ( $15000 + (-8000) + 12000 = 19000$ )

18. -4 ( $(-6) + (-9) + (-4) - (-15) = -6 - 9 - 4 + 15 = -4$ )

## Part C: Advanced Applications

19. Floor 0 (ground level). Calculation:  $0 + 12 - 5 + 8 - 15 = 0$

20. Other integer: -21 ( $8 + x = -13$ ,  $x = -21$ ). Product:  $8 \times (-21) = -168$

21. Correct: 60, Deducted: -10, Total: 50 marks ( $12 \times 5 = 60$ ,  $5 \times (-2) = -10$ ,  $3 \times 0 = 0$ , Total =  $60 - 10 = 50$ )

**22.**  $-8 \left( [(-15) \times 4 + 20] \div [(-8) + 3] \right) = [-60 + 20] \div [-5] = [-40] \div [-5] = 8$ ... Wait, let me recalculate:  $[-40] \div [-5] = +8$ , not -8. Answer is +8)

**23.**  $10^{\circ}\text{C} (8 + (-3) + 5 + (-2) + (-4) + 6 = 8 - 3 + 5 - 2 - 4 + 6 = 10^{\circ}\text{C})$

**24.** Balance: ₹8,250  $(5000 + 3500 - 2800 - 150 + 4200 - 1500 = 8250)$ . Withdrawal charges: ₹100  $(2 \text{ withdrawals} \times 50)$ . Final: ₹8,150

## Performance Analysis & Learning Path

**Total Questions: 24 | Total Marks: 24**

Score Range	Performance Level	Recommended Action Plan
20-24	★★★★ Excellent	<b>Ready for Advanced Concepts:</b> <ul style="list-style-type: none"> <li>• Properties of integers (commutative, associative, distributive)</li> <li>• Integer equations and inequalities</li> <li>• Applications in coordinate geometry</li> <li>• Directed numbers in physics (velocity, acceleration)</li> <li>• Advanced problem-solving with multiple operations</li> </ul>
15-19	★★★ Very Good	<b>Strengthen Core Skills:</b> <ul style="list-style-type: none"> <li>• Practice sign rules for multiplication/division daily</li> <li>• Master BODMAS with negative numbers</li> <li>• Work on word problems involving temperature, profit/loss</li> <li>• Solve 15 mixed problems daily for 2 weeks</li> <li>• Focus on multi-step calculations</li> </ul>
10-14	★ Good Effort	<b>Build Fundamentals:</b> <ul style="list-style-type: none"> <li>• Review addition and subtraction rules thoroughly</li> <li>• Use number line for visualization</li> <li>• Practice sign rules: <math>(+)(+) = +</math>, <math>(-)(-) = +</math>, <math>(+)(-) = -</math></li> <li>• Do 20 basic problems daily (5 each operation)</li> <li>• Work with teacher/tutor on problem areas</li> <li>• Create flashcards for operation rules</li> </ul>

0-9	Needs Improvement	<b>Back to Basics:</b> <ul style="list-style-type: none"> <li>• Understand what integers are (positive, negative, zero)</li> <li>• Master number line representation</li> <li>• Start with addition/subtraction only for 1 week</li> <li>• Use real-life examples (temperature, elevation, money)</li> <li>• Get one-on-one tutoring</li> <li>• Practice with manipulatives (colored chips for +/-)</li> <li>• Review Class 6 integer concepts</li> </ul>
-----	-------------------	---

#### Common Mistakes to Avoid:

- ❌  $(-5) + (-3) = -2$  (WRONG! Same signs → ADD and keep sign = -8)
- ❌  $(-5) \times (-3) = -15$  (WRONG! Same signs → Result is POSITIVE = +15)
- ❌  $5 - (-3) = 2$  (WRONG! Subtracting negative means ADD =  $5+3 = 8$ )
- ✅ Always write out the signs clearly in your working

THINKING  
 ✨ Outstanding Work Completing This Worksheet! ✨

Master integers and you'll master mathematics! Keep practicing!

🔥 Download more Class 7 worksheets at [thinkingjuggernaut.in](https://thinkingjuggernaut.in)

📅 Practice integer operations daily for 15 minutes

🍎 Apply integers to real-life situations you encounter!
