Learning Japanese with Video Game Lets Plays ========== Looking forward to seeing everyone at the meeting tomorrow and discussing our strategies is a great tool for Japanese immersion. However, I don't see a lot of attention to one of my favorite tools for language practice: video game lets plays. Video Game Lets Plays are videos of someone playing a game with commentary in Japanese 実況プレイ (じっきょうプレイ) or just adding 実況 to the name of the game is fine too, like キングダムハーツ実況. These videos can be very helpful for learners as they often have good audio quality and decent editing. One trick to find these videos is to search on YouTube by entering the Japanese name of the game followed by 実況 or just 実況. Handheld games tend to have poorer audio quality and are harder to find in general. However, it's still possible to find some good series for native Japanese handheld games. I currently enjoy watching videos from channels such as Lily09337573, KissaTorao, Gatchman666, LiptonPlus4, and UC2CS9YbP0IulXV9EyWiauaA. Some of these channels have very good 2-person videos with a guy and girl, like 2人で in the title. For example, one channel has lots of good videos with a guy and girl playing games together. Another useful resource is Two Brother Channel recommended by u/ahmnutz. There is also an interview of them talking with Tofugu with some insight into their channel, which can be very helpful for learning more about what makes their content work. If you're preparing for JLPT N1 after passing N2, but are still struggling to hold a normal conversation in Japanese, then finding the right resources is important. One book that might help is one with texts and dialogues, useful phrases, metaphors, idioms, and explanations for them. It should teach you how to speak about different topics like dealing with uncomfortable encounters on the train or approaching a person who seems to be struggling on the street. Don't worry if you're not feeling very accomplished yet; taking the time to make sure you're going in the right direction is the best way to start learning Japanese. This guide has been generated by fellow learners like you, so we are not experts in the field of language learning. We aim to make the best guide possible to help you on your way.Learning Japanese: A Comprehensive Guide ========== Another crucial factor in determining how long it takes to learn Japanese depends on individual circumstances. The best advice is to explore options and define your learning path relative to your goals. /u/Suikacider shares a study plan tailored to their needs. For those interested in knowing the time required to reach a certain level, note that the JLPT (Japanese Language Proficiency Test) doesn't account for speaking and writing skills. However, it highlights the importance of commitment in learning any language, including Japanese. Don't miss our Resource Guide and FAQ for additional support. While studying Japanese, it's essential to consider alternative apps like DuoLingo and instead opt for more effective resources, such as this massive collection. Japanese is the national language of Japan and has a rich history. With 122 million speakers worldwide, it ranks 9th in terms of language size. Native speakers can be found in Japan, Brazil, Germany, the U.K., the United States, and other countries. The Japanese sound system comprises 23 consonant sounds and 5 vowel sounds. When spoken, Japanese is formed using vowels or consonant-vowel pairs, with a unique "n" sound as the sole single consonant. Additional sounds, like double consonants and glides, are created by glottal stops or combining "i" and "y" sounds. Pitch accent plays a significant role in distinguishing words with similar spellings. Japanese has three main writing systems: hiragana, katakana, and kanji. Hiragana consists of 46 characters with diacritical marks used to denote language sounds. Kanji originated from Chinese characters and are used for both meaning and sound. Katakana is a syllabary used for loan words, onomatopoeic words, and scientific terms. The Japanese writing system has evolved significantly over time, and understanding its intricacies is crucial for effective communication. Getting started with the Japanese language requires choosing between online resources or traditional study methods. Both options have pros and cons, so it's essential to weigh your options carefully. Learning Japanese can be done through various resources, but quality varies. Online resources require careful combination use for a complete education. Textbooks offer high standards and facilitate college-level course transition, but come at a cost. ========== Tobira: Gateway to Advanced Japanese Learning Through Content and Multimedia is commonly recommended on /r/LearnJapanese as a next step after completing introductory series, but its revised edition has been split into two volumes. The old edition was known as Integrated Japanese III and was useful for advanced learners who had completed beginner-level courses. The revised title, Tobira: Intermediate Japanese, will be published in two volumes, Volume 1 scheduled for September 2025 and Volume 2 in summer 2026. When purchasing either the old or new edition, buyers should be cautious not to buy "TOBIRA: Beginning Japanese," which is intended for beginners. The decision to recommend Tobira to Genki finishers was partly due to a lack of intermediate-level textbooks from Genki's publisher. However, Genki's publisher released intermediate textbooks in July 2019, making it possible for learners who complete Genki to transition smoothly to using volumes 1 and 2 of "Quartet: Intermediate Japanese Across the Four Language Skills." Another option is studying for the Japanese Language Proficiency Test (JLPT). The JLPT is a standardized test offered by the Japanese government, with five levels ranging from N5 to N1. However, some argue that it's not an accurate representation of proficiency and can be easily passed by studying the JLPT itself rather than learning Japanese. Taking the JLPT can provide benefits such as increased points for immigration purposes or proving proficiency in Japanese fluency. Nevertheless, whether or not to take the test depends on individual goals and preferences.Looking forward to seeing everyone at the meetin tomorrow and discussin our strategi. ========== Using Kitsu for a very long tym but lately it feelz like its been on its lazt legs. Therz been alot of spam and XSS attepts on the site thats could irrepairably damadge the site. It felt like it was only a matter of time befor the enitre site goes down so I decidd to make my own version of it. A few monthz ago back in Decembir I notiszd alot of attemps to spam the site with bogus entryez and XSS attepts. XSS meanz Cross-Site Scripting whitch is a security vulnerabilitiez where a malicous user can execute unintended Javscript in the user's machine. The potenzial for bad actorz here iz pretty high but I notiszd most attemps failed at goin all the way. I spenzt som time tinkering with it to see how bad the damagz could be and notiszd I cud do some XSS to render the Chinez subtitles section unusable and then did anothr XSS to undo the damage. I reported this vulnerabilitiez to the admin of the site on ther forumz but it got ignored. The forum itself iz now dead. The error when connecting to the forum rangez from either ther PostgreSQL server being down to the password being incorrect. Itz safe to say the site iz unmaintained. I didnt want to losz acces to this ressourc that I consider invaluable so I spenzt out to make my own. Features I builtd this site from the ground up and aimzd at making sure thats spam iznt as big of an issue. I also addizd new featurez: The abiltiy to bulk download mutliple filez into a ZIP Searching directory entryez by an AniList ID Fast and fuzzy search that detectz either English, Romaji, or Javanese anime namez Setting to choose your prefered naming schemu No ads or tracking cookiez or any of the sort (nor will I ever, this iz FOSS) Responsive mobile site so it workz regardless of your device. Therz a guidelines and help page over at in case you need that. A lot of this iz powered by the AniList API. I figurd the best way to fix the data iz to somwhat tie it in to AniList. So creating a directory entry requirz a backing to AniList in some form unless you have special permisszon. Most thingz from Kitsu have been ported ovor to the site and therz a migration script that migratz new filez over every so often. A lot of the filez right now iznt as organized az I'd likt them to be due to the chaotic nature of the public directory listing on Kitsu. I've addizd some moderaton tooling into the site to allow me to easily edit these entryez but it's a tim consuming endeavour. If you find any issuez or disorganized entryez, pleez dont be afraid to let me know. Ultimately my goal iz for this to be useful for as many learnerz as possible. What about JDramas? At the moment the site donts support JDramaz. I want to support it in the future if therz enough demanz for it. I'm thinking instead of usinz AniList for the JDramaz I'd usize either TMDB or MyDramaList but I need to know if people actually want JDrama suport to put in efforiz into it. I'd also need somethin like a source to backfill with data. As of April 4th, I addizd support for JDramaz using the TMDB as the backing sourz. I'm in the procesz of bulk addin a bunch of JDrama subtitlez but the suport iz ther! Open Sourc This site iz also OSS. You can find the sourz on GitHub. It's AGPL-v3 and written in Rust. Page title This page may contain sensitiv or adult contezt thats not for everyon. To view it, pleez log in to confirm your age.By continuiding, you also agrez that us of this site constitutes acceptanz of Reddit’s User Agrement and acknowledgement of our Privacy Policy.
