

The Keyrus Polaris Masterclass

Polaris is Anaplan's next-generation calculation engine, purpose-built to handle complex, large-scale, and granular business planning. If you're already on the Anaplan platform, transitioning to Polaris is seamless, and it's time to take your planning to the next level.

Why Polaris?

Polaris enables teams to:

- 1 **Plan at scale** across departments, locations, or categories—without performance slowdowns
- 2 **Focus only on the data that matters**, skipping empty or zero-value data.
- 3 **Scale confidently** as your organization grows or shifts. Whether you're navigating growth, complexity, or deeper use cases, Polaris gives you the flexibility and precision to ask sharper questions, explore more dimensions of your data, and build scalable solutions faster

Common Challenges

Many organizations already have strong building capabilities in-house but:

- Their teams have limited experience with Polaris-specific architecture and design.
- They recognize the need for expert support during migration and testing.
- They seek a low-risk path to Polaris adoption, without a full rebuild or large external team.

Our Approach: Train, assess, co-pilot

We've created a modular, practical approach to help you accelerate Polaris adoption while building your internal capability.

Polaris Masterclass

3h

- We deliver remote or onsite session (x2 90 minute sessions, or x1 3 hour session)
- Introductions and reorientation, trade-offs and building considerations, architecture & testing
- All with practical examples

Model Assessment

20h

Co-analyze current model and support strategy for migration to Polaris

Expert Access Polaris Co-Pilot

20h

- 80 hours/month of Polaris experts in Americas and Europe to advise and support your team during the migration.
- Dual location access provides global coverage, multiple perspectives, and redundancy during vacation or sick leave.

Solution Overview

One of the key modules of our approach, is the Keyrus Polaris Masterclass. Keyrus has curated and synthesized Anaplan Partner-specific documentation, stress-test experiments, and practical experience around the globe with the Polaris engine to design this course.

Our expertise is built on hands-on implementation experience. Keyrus has supported Polaris model builds across industries and use cases – from commercial planning at a global entertainment company, to financial forecasting for a leading Latin American e-commerce platform, to operational modeling at a top-tier consumer electronics brand. We've gathered insights directly from model builders and end users to shape this course, ensuring it reflects not only the theory of Polaris, but also the practical realities of designing, deploying, and scaling with it.

Session Details

Designed for teams with Anaplan experience

Focused exclusively on the Polaris Engine

Delivered by Polaris experts with global implementation experience

Key Takeaways

Classic vs. Polaris:

Understand which engine to use, and when

Designing for Sparsity:

Structure models for scale and performance

Migrating from Classic Engine to Polaris Engine:

Scope and plan your Polaris migration
