

5 Ways DSOs Can Simplify EFT Reconciliation Without Slowing Down Collections

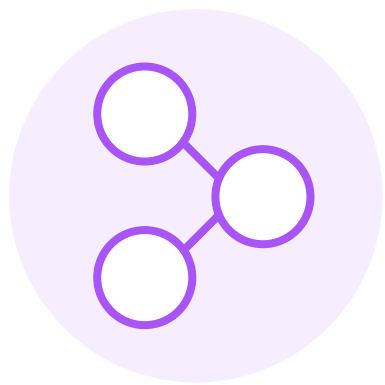

A practical guide for DSO revenue cycle teams

1

Centralize Remittance Collection

Pull EOB and EOP documents from all payers automatically into one place, so your team is not starting from scratch every morning.

2

Automate Deposit Matching

Intelligent matching connects EFT deposits to remittance documents automatically, reducing errors and freeing your team from manual cross-referencing.

3

Standardize Workflows Across Locations

Consistent processes across every office make onboarding faster, reduce the impact of turnover, and give leaders a reliable performance baseline.

4

Build SLA Tracking Into Posting

Real time visibility into posting deadlines means your team knows what is overdue before it becomes a problem.

5

Use Reconciliation Data to Drive Decisions

Reconciliation data tells you where your revenue cycle is losing time. Treat it as operational intelligence, not just a compliance record.
