

# French-made AI at the service of healthcare.

Transforming support for the most vulnerable through AI that analyses sounds.

## The solution

The box, connected to Wi-Fi, analyses the sounds in the room.

Critical or alarming sounds are automatically detected by our AI, which identifies their nature in order to trigger the appropriate alert.

The telephone transmits qualified alerts to carers in real time.

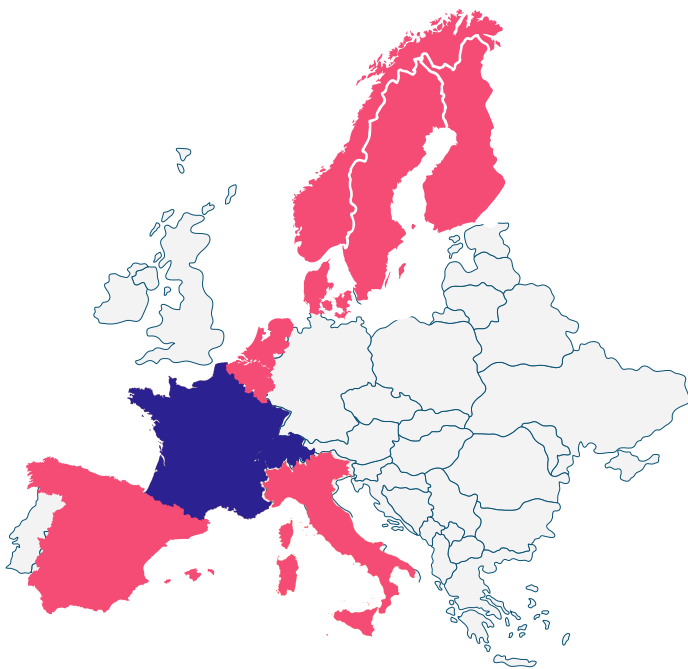

## Continuous and discreet monitoring

Thanks to **acoustic monitoring**, Orikio identifies alarming noises, calls for help, respiratory distress and other **distressing situations**, and **alerts carers in real time**.

- Safety for residents,
- More time for care,
- Peace of mind for families.

## Designed for **your needs**

Co-designed with healthcare teams working on the front line, orikio continuously monitors vulnerable individuals.
