

	KEY CHEMICAL & RISK POLICY	Doc. No : QAD/P/001
		Rev No : 00
		Rev Date :
		Pg. No : 1 of 1

At AFC System Private Limited, our mission is to produce premium quality products using non-toxic chemicals and materials, ensuring the well-being of our staff, clients, and the planet. In pursuit of this objective, we collaborate with our suppliers to meticulously analyse the composition of all materials used in our products, down to the minutest detail of 100 parts per million. With this information, we actively reduce the presence of harmful chemicals throughout the product's life cycle and seek out dependable, safe alternatives. This commitment extends to all products sourced from our supply chain, utilized in our manufacturing procedures, and present within our production facilities.

No product containing new chemicals can be acquired or introduced to the premises without undergoing an assessment by the Quality Department, in accordance with the chemical acceptance criteria. Suppliers who exhibit compliance with this policy and incorporate environmentally friendly chemistry into their product formulations will be given preference.

All employees must strictly follow the guidelines outlined in the Chemical Management Plan, which emphasizes the prevention and reduction of potential risks arising from chemicals. This encompasses the correct storage, labelling, handling, transportation, and disposal of chemicals. Employees are prohibited from introducing new chemicals onto the premises or moving chemicals between buildings unless they have obtained prior approval from the Environment department. Hazard identification and mitigation from other sources than chemicals are also covered in our Environmental, Occupational Health and Safety Management System Manual to ensure safer processes for workers and the environment.

By meticulously assessing, choosing, and monitoring chemicals, we strive to establish transparency for our stakeholders by delivering precise and significant data about product composition. This empowers our customers to align with their specific chemical criteria and opt for products that most effectively cater to their users' needs. This aligns with our broader objective of ensuring that our products contribute to creating healthier workplaces for all.
