

Don't just verify your cited authorities: RealityCheck them

AI can draft a polished brief in seconds. BriefCatch's RealityCheck checks the part that polish can hide: whether the cases you cite actually say what your brief says they say.

Confirm the authority is real

Verify that every cited case exists and can be found.

Catch what the citation gets wrong

Flag altered quotes, misstated holdings, unsupported propositions, and other discrepancies before they reach a client, court, or opposing counsel.

Surface what the reader can't see

Detect hidden text, concealed formatting, zero-width characters, and other invisible content before the document leaves your hands.

HOW IT WORKS

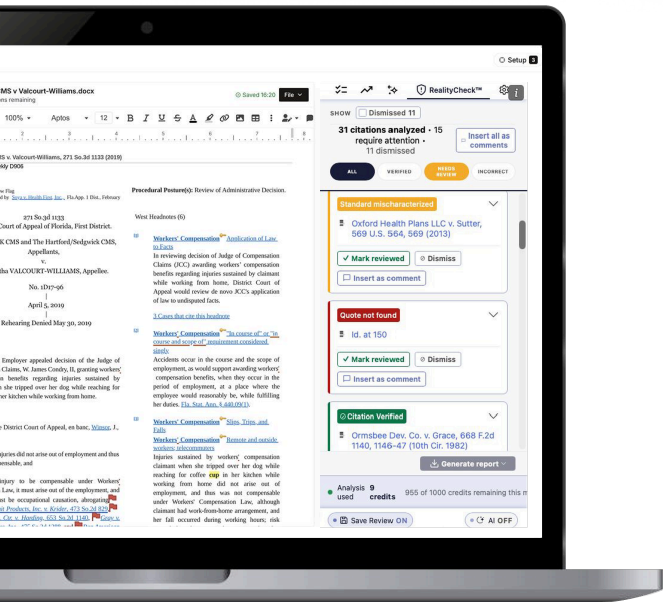

Check your Citations. Stay in your Workflow.

RealityCheck is standard on every BriefCatch plan and works in Word and the BriefCatch Online App.

For every flagged citation, RealityCheck shows what it found, what the opinion actually says, and a suggested fix. Each opinion's full text is also available from each verdict card.

Flagged citations are color-coded for easy review and action:

-  **Incorrect** Citations not being used correctly
-  **Caution** Citation needs verification
-  **Citation Verified** Citations confirmed as correct

Check the case. Check the quote. Check the point.

BriefCatch reads the cases cited in your brief and checks the claims you make about them. It verifies:

-  **Verifiability** Can the cited case be found and checked?
-  **Support** Does the authority actually say what the brief claims it says?
-  **Attribution** Is language from a concurrence, dissent, or plurality presented as the court's holding without disclosure?
-  **Quotations** Does the quoted language actually appear in the opinion? Has it been altered?
-  **Dispositions** Did the brief get the case's outcome correct?
-  **Hidden Content** Is there hidden text, such as white or tiny text, Word's hidden formatting, or invisible characters?
-  **Negative treatment** Has a higher court or later case overruled, reversed, or vacated the case on the point you cite it for?

WHY BRIEFCATCH

Accuracy isn't housekeeping: it's a competitive advantage

Stop AI mistakes before they become your mistakes

AI makes drafting faster. It also makes polished-looking errors easier to miss. RealityCheck gives every cited case a substantive review before the brief goes out the door.

Find the weakness in the other side's brief.

RealityCheck isn't limited to your own work. Run an opponent's brief to surface altered quotations, unsupported propositions, misstated holdings, and authorities that need a closer look.

Protect the credibility behind every filing.

Formatting can be perfect. The citation can exist. The case can still be good law. And the sentence can still overstate what the opinion says. RealityCheck is built for that gap.

Only BriefCatch checks the case, the claim, and the quality

AI DRAFTING TOOLS

Fast drafts. Unverified citations.

Speeds up drafting, but even the most legal-focused solutions can produce fabricated, inaccurate, or misused citations. You still have to manually verify the work.

BRIEFCATCH

Real cases. Correctly used. Better writing.

Only BriefCatch confirms cited cases exist and verifies whether they accurately support your claims, while sharpening clarity and persuasion.

CITATORS

Good law. Not necessarily correctly used.

Confirms whether a case is still good law, but leaves a critical blind spot in whether your brief uses it accurately.

Built for every side of the bench

FOR LAWYERS

- Catch fabricated authorities and subtle legal errors
- Strengthen clarity, precision, and persuasion
- Protect your credibility with the court

FOR LEGAL TEAMS

- Strengthen quality control across every brief
- Reduce errors and reputational risk
- Build confidence in AI-assisted workflows

FOR COURTS

- Review filings more efficiently
- Surface fabricated or misused authority
- Improve confidence in AI-assisted submissions
